E01 – WASTE PRODUCED IN A WEEK

How much waste do you produce in a week?

Results E01

Choice	Total
less than a day	0
1 day	1
2 days	1
3 days	3
4 days	2
5 days	2
6 days	0
still not full	4

Your Personal Carbon Footprint

Problem already solved?

So we just reduce our CO2 footprint and we are good?

Your Personal Carbon Footprint

Microsoft will be Carbon Negative by 2030

“By 2030 Microsoft will be carbon negative, and by 2050 Microsoft will remove from the environment all the carbon the company has emitted either directly or by electrical consumption since it was founded in 1975.”

Your Personal Carbon Footprint

Apple will be Carbon Neutral by 2030

July 2020

“Apple today unveiled its plan to become carbon neutral across its entire business, manufacturing supply chain, and product life cycle by 2030. The company is already carbon neutral today for its global corporate operations, and this new commitment means that by 2030, every Apple device sold will have net zero climate impact.”

Your Personal Carbon Footprint

Polestar – 2030 Climate-neutral Car

“...we’re embarking on our greatest journey so far: challenging ourselves to create a climate-neutral car by 2030, by reducing emissions throughout supply chain and production.”

Your Personal Carbon Footprint

Polestar – 2030 Climate-neutral Car

“...we’re embarking on our greatest journey so far: challenging ourselves to create a climate-neutral car by 2030, by reducing emissions throughout supply chain and production.”

“Relying on the current trend of offsetting by planting trees is not sustainable in the long run. It would mean using too much land, and the long-term carbon-storage capacity of forests and soils is not well known. Offsetting by planting trees also risks contributing to monocultures and loss of biodiversity. Additionally, there can be no guarantee that a forest won’t later be logged, devastated by a forest fire or altered by climate change.”

Your Personal Carbon Footprint

Problem already solved?

It is not only about CO₂...

Your Personal Carbon Footprint

Greenwashing?

Apple iPad Pro 11" 2018	<ul style="list-style-type: none">• Gobs of adhesive hold most everything in place, making all repairs more difficult.• The battery is secured with both easier-to-remove stretch-release tabs and conventional, non-removable adhesive.• The USB-C port is modular and can be independently replaced.
Microsoft Surface Pro 6 2018	<ul style="list-style-type: none">• All repairs require first removing the display assembly—which is stubbornly glued in place, expensive, and prone to shattering.• The battery is firmly glued in place, with its connector pinned under the motherboard—requiring near-total disassembly for service.• Once upon a time, Surface Pro storage was removable—but not in this version.
Apple iPad Air 3 2019	<ul style="list-style-type: none">• Battery replacement is possible, but still unnecessarily difficult.• Gobs of adhesive hold many parts and cables in place, complicating all repairs.• Many components are modular and can be replaced independently, but the Lightning port is soldered to the logic board.
Apple iPad 7 2019	<ul style="list-style-type: none">• As with all iPads, a solid barrier of very strong adhesive hinders all repairs.• The Lightning port, a common point of failure, is soldered to the logic board.• More adhesive holds nearly everything else in place. Battery and logic board replacements are particularly obnoxious.
Apple iPad Mini 5 2019	<ul style="list-style-type: none">• Battery replacement is possible, but still unnecessarily difficult.• Gobs of adhesive hold many parts and cables in place, complicating all repairs.• Removing the home button is tough, and will be required for display replacement if you want to keep Touch ID functionality.

EXERCISE E02

E02 Calculate your Carbon Footprint

- Go to the website of the UN carbon footprint calculator – [Link](#)
- Calculate your carbon footprint.
- Submit your result via the poll – [Link](#) – by clicking on the matching poll result.

CLIMATE CHANGE – THE BASICS

Climate Change Basics

Climate vs. Weather – Weather and Weather Conditions

Climate Change Basics

Climate vs. Weather – Weather and Weather Conditions

*"**Weather** is the combination of the current meteorological components, e.g. temperature, wind direction and speed, amount and type of precipitation, sun shine hours, etc. The weather is defining a short time period up to several days."*

Climate Change Basics

Climate vs. Weather – Weather and Weather Conditions

*"**Weather** is the combination of the current meteorological components, e.g. temperature, wind direction and speed, amount and type of precipitation, sun shine hours, etc. The weather is defining a short time period up to several days."*

*"**Weather condition** is the regional weather during a defined time period from one up to several weeks. Weather condition is describing typical weather phenomena, such as a series of thunderstorm in hot summer, foggy month in autumn or other weather conditions which are typical for a specific region and/or season."*

Climate Change Basics

Climate vs. Weather – Climate

*"The **climate** is describing the long term (min 30 years) and average weather conditions for a specific region. Examples: maritime climate, cold-dry desert climate, tropical climate."*

Climate Change Basics

Climate vs. Weather – Climate Change

***Climate change** is a long-term change in the average weather patterns that have come to define Earth's local, regional and global climates. These changes have a broad range of observed effects that are synonymous with the term."*

Climate Change Basics

Greenhouse Effect

Climate Change Basics

Global Warming

*"**Global warming** is the long-term heating of Earth's climate system observed since the pre-industrial period (between 1850 and 1900) due to human activities, primarily fossil fuel burning, which increases heat-trapping greenhouse gas levels in Earth's atmosphere."*

Climate Change Basics

Global Warming

*"**Global warming** is the long-term heating of Earth's climate system observed since the pre-industrial period (between 1850 and 1900) due to human activities, primarily fossil fuel burning, which increases heat-trapping greenhouse gas levels in Earth's atmosphere.*

The term is frequently used interchangeably with the term climate change, though the latter refers to both human- and naturally produced warming and the effects it has on our planet.

Climate Change Basics

Global Warming

***"Global warming** is the long-term heating of Earth's climate system observed since the pre-industrial period (between 1850 and 1900) due to human activities, primarily fossil fuel burning, which increases heat-trapping greenhouse gas levels in Earth's atmosphere.*

The term is frequently used interchangeably with the term climate change, though the latter refers to both human- and naturally produced warming and the effects it has on our planet.

It is most commonly measured as the average increase in Earth's global surface temperature."

Climate Change Basics

Global Warming – Earth Energy Budget

Climate Change Basics

Global Warming – Annual Mean Global Temperatures (1850-2018)

- 1 stripe = 1 year

Climate Change Basics

Greenhouse Gases (GHG)

*"**Greenhouse gases** are those gaseous constituents of the atmosphere, both natural and anthropogenic, that absorb and emit radiation at specific wavelengths within the spectrum of terrestrial radiation emitted by the Earth's surface, the atmosphere itself and by clouds. This property causes the greenhouse effect."*

Climate Change Basics

Greenhouse Gases (GHG)

*"**Greenhouse gases** are those gaseous constituents of the atmosphere, both natural and anthropogenic, that absorb and emit radiation at specific wavelengths within the spectrum of terrestrial radiation emitted by the Earth's surface, the atmosphere itself and by clouds. This property causes the greenhouse effect."*

Water vapour (H₂O), carbon dioxide (CO₂), nitrous oxide (N₂O), methane (CH₄) and ozone (O₃) are the primary GHGs in the Earth's atmosphere."

Climate Change Basics

GHG Emissions – Cumulative CO₂ Emissions (1850 – 2021)

Climate Change Basics

GHG Emissions – CO₂ Emissions per Capita (2019)

Notes:

CO₂ emissions from fuel combustion only; no other greenhouse gases or natural sources; aviation and marine bunkers not shown as territory but included in average and totals.

¹⁾ Middle East A: Bahrain, Oman, Kuwait, Qatar, United Arab Emirates

²⁾ Middle East B: Israel, Jordan, Lebanon, Syrian Arab Republic, Yemen

³⁾ Asia A: Brunei Darussalam, Malaysia, Mongolia, Singapore

⁴⁾ Asia B: Asia without Asia A, China, India, Thailand, Chinese Taipei, Indonesia, S. Korea, Japan

⁵⁾ China: People's Rep. of China, Hong Kong

Climate Change Basics

GHG Emissions – CO₂ Concentration over the last 800,000 Years

Climate Change Basics

Climate Feedback (Effects)

„Processes that can either amplify or diminish the effects of climate forcings. A feedback that increases an initial warming is called a 'positive feedback'. A feedback that reduces an initial warming is a 'negative feedback'."

Climate Change Basics

Feedback Effects – Examples

- Wildfires

Climate Change Basics

Feedback Effects – Examples

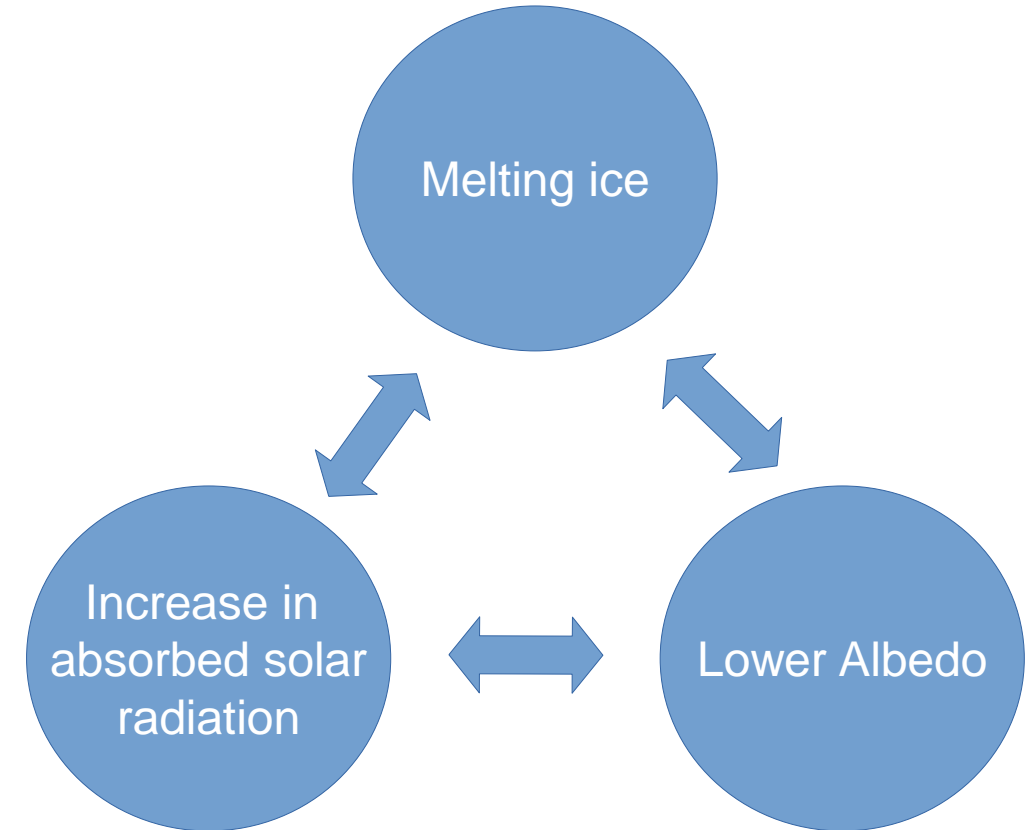

- Wildfires
- Ice-Albedo effect

Albedo: Measure of the diffuse reflection of solar radiation

Climate Change Basics

Feedback Effects – Examples

- Wildfires
- Ice-Albedo effect

Albedo: Measure of the diffuse reflection of solar radiation

Climate Change Basics

Feedback Effects – Examples

- Wildfires
- Ice-Albedo effect
- Thawing permafrost

Climate Change Basics

Feedback Effects – Examples

- Wildfires
- Ice-Albedo effect
- Thawing permafrost
- Warming ocean → collapse of the Gulf Stream

Climate Change Basics

Feedback Effects – Examples

- Wildfires
- Ice-Albedo effect
- Thawing permafrost
- Warming ocean → collapse of the Gulf Stream
- Etc.

Climate Change Basics

Carbon Footprint

*“The **carbon footprint** is a measure of the exclusive total amount of carbon dioxide emissions that is directly and indirectly caused by an activity or is accumulated over the life stages of a product.”*

Climate Change Basics

Carbon Footprint – Origins

Climate Change Basics

Carbon Footprint – Origins

"The first step to reducing your emissions is to know where you stand. Find out your #carbonfootprint with our new calculator & share your pledge today!" - BP (British Petroleum)

Climate Change Basics

Carbon Footprint – Who Emits CO₂?

- 100 companies produced more than 70% of the world's greenhouse gas emissions between 1988 and 2017
- Guess who is on the list?

Climate Change Basics

Carbon Footprint – Who Emits CO₂?

- 100 companies produced more than 70% of the world's greenhouse gas emissions between 1988 and 2017
- Guess who is on the list?

- 1) China (Coal) → 14.32%
- 2) Saudi Arabian Oil Company (Aramco) → 4.50%
- 3) Gazprom OAO → 3.91%
- 4) National Iranian Oil → 2.28%
- 5) ExxonMobil Corp → 1.98%
- 6) Coal India → 1.87%
- 7) Petroleos Mexicanos (Pemex) → 1.87%
- 8) Russia (Coal) → 1.86%
- 9) Royal Dutch Shell PLC → 1.67%
- 10) China National Petroleum Corp (CNPC) → 1.56%
- 11) BP PLC → 1.53%**
- 12) Chevron Corp → 1.31%**

Climate Change Basics

Carbon Footprint – Who Emits CO₂?

How Much Time Do We Have Left?

Global GHG Emission Pathways (2019)

Annual global greenhouse gas emissions
CO₂-equivalent gigatonnes

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C

*"If we can keep warming below **3°C** we likely remain within our adaptive capacity as a civilization, but at **2.7°C** warming we would experience great hardship." - Prof. Michael Mann*

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Heat Waves

- 1-in-50 year extreme heat waves
 - 0°C → once every 50 years
 - 1°C (current) → 4.8 times every 50 years

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Heat Waves

- 1-in-50 year extreme heat waves
 - 0°C → once every 50 years
 - 1°C (current) → 4.8 times every 50 years
 - 2°C → 13.9 times every 50 years

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Heat Waves

- 1-in-50 year extreme heat waves
 - 0°C → once every 50 years
 - 1°C (current) → 4.8 times every 50 years
 - 2°C → 13.9 times every 50 years
 - 3°C → 27.4 times every 50 years
 - 4°C → 39.2 times every 50 years

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Heat Waves (Australia)

- January 2020 was Sydney's hottest January on record → 04.01.2020 - 50°C
- Number of days hotter than 35°C based on 3°C global warming (compared to now):

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Heat Waves (Australia)

- January 2020 was Sydney's hottest January on record → 04.01.2020 - 50°C
- Number of days hotter than 35°C based on 3°C global warming (compared to now):
 - Sydney → 11 days/year instead of 3.1 days/year

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Heat Waves (Australia)

- January 2020 was Sydney's hottest January on record → 04.01.2020 - 50°C
- Number of days hotter than 35°C based on 3°C global warming (compared to now):
 - Sydney → 11 days/year instead of 3.1 days/year
 - Melbourne → 24 days/year instead of 11 days/year

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Heat Waves (Australia)

- January 2020 was Sydney's hottest January on record → 04.01.2020 - 50°C
- Number of days hotter than 35°C based on 3°C global warming (compared to now):
 - Sydney → 11 days/year instead of 3.1 days/year
 - Melbourne → 24 days/year instead of 11 days/year
 - Darwin → **265** days/year instead of 11 days/year

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Biodiversity (Coral Reef Example)

- 1.5°C → 70 to 90% of coral reefs will die off worldwide
- 2.0°C → 99% of coral reefs will die off worldwide

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – More rain, but not everywhere

- 1.5°C → 17% of land will face extreme rainfall and average rainfall will increase by 2%

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – More rain, but not everywhere

- 1.5°C → 17% of land will face extreme rainfall and average rainfall will increase by 2%
- 2.0°C → 36% of land to extreme rainfall and cause average rainfall to rise 4%

→ Half a degree of warming would double the effects

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – More rain, but not everywhere

- Average drought length (globally):
 - 1.5°C → 2 months
 - 2.0°C → 4 months
 - 3.0°C → 10 months

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – More rain, but not everywhere

- Average drought length (Europe):
 - Eastern Europe
 - 1.5°C → 2 months
 - 2.0°C → 4 months
 - 3.0°C → 8 months
 - Northern Europe
 - 1.5°C → 0 month
 - 2.0°C → 0 month
 - 3.0°C → 1 month
 - Southern Europe
 - 1.5°C → 3 months
 - 2.0°C → 6 months
 - 3.0°C → 12 months
 - Western Europe
 - 1.5°C → 1 month
 - 2.0°C → 2 months
 - 3.0°C → 4 months

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – More rain, but not everywhere

- Average drought length (Europe):
 - Eastern Europe
 - 1.5°C → 2 months
 - 2.0°C → 4 months
 - 3.0°C → 8 months
 - Northern Europe
 - 1.5°C → 0 month
 - 2.0°C → 0 month
 - 3.0°C → 1 month
 - Southern Europe
 - 1.5°C → 3 months
 - 2.0°C → 6 months
 - 3.0°C → 12 months
 - Western Europe
 - 1.5°C → 1 month
 - 2.0°C → 2 months
 - 3.0°C → 4 months
- Extreme case → North Africa:
 - 1.5°C → 7 months
 - 2.0°C → 20 months
 - 3.0°C → **60 months**

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – More rain, but not everywhere

- Population exposed to water scarcity
 - 1.5°C → 271 million
 - 2.0°C → 388 million

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – More rain, but not everywhere

- Population exposed to water scarcity
 - 1.5°C → 271 million
 - 2.0°C → 388 million

→ Resource wars?

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Economics

- Global GDP in 2100 (per capita)
 - 1.5°C → -8%
 - 2.0°C → -13%
- Annual flood damage losses from sea level rise:
 - 1.5°C → \$10.2tn
 - 2.0°C → \$11.7tn

How Much Time Do We Have Left?

1.5°C vs. 2/3/4°C – Economics

- Increase of economic damages from river flooding
 - Germany
 - 1.5°C → 608%
 - 2.0°C → 789%
 - 4.0°C → 1234%
 - UK
 - 1.5°C → 1206%
 - 2.0°C → 1219%
 - 4.0°C → 6543%
 - Hungary
 - 1.5°C → 3165%
 - 2.0°C → 2442%
 - 4.0°C → 4312%

How Much Time Do We Have Left?

1.5°C – Now!

"A century of rising emissions must end before 2025 to keep global heating under 1.5C, beyond which severe impacts will increase further, hurting billions of people".

How Much Time Do We Have Left?

1.5°C – Now!

"A century of rising emissions must end before 2025 to keep global heating under 1.5C, beyond which severe impacts will increase further, hurting billions of people".

→ **We have 20 month left!**

CONCLUSION

Conclusion

- Basic concepts and definitions of climate change
 - Weather vs. climate
 - GHGs
 - Global warming
 - Feedback effects
 - Etc.
- Effects of different global warming paths (1.5°C vs 2/3/4°C)
