Question 1

- At which university do you study?
 - a) TU Clausthal
 - b) Ostfalia
 - c) Göttingen
 - d) other / not a student

Question 2

- What do you study?
→ Type your response in the poll field.

Question 3

- Do you think that the current actions taken to address climate change and environmental pollution are sufficient and appropriate to ensure a future for you and your children?
 - Yes
 - No
 - Not sure

Question 4

- Are you involved in any climate change or sustainability movement / organization / party / etc. - if yes, which one?
 - No? → Type “no”
 - Yes? → Type the name/abbreviation, e.g., “XR” (Extinction Rebellion), “FF” (Fridays for Future), etc.

AN INCONVENIENT PROBLEM

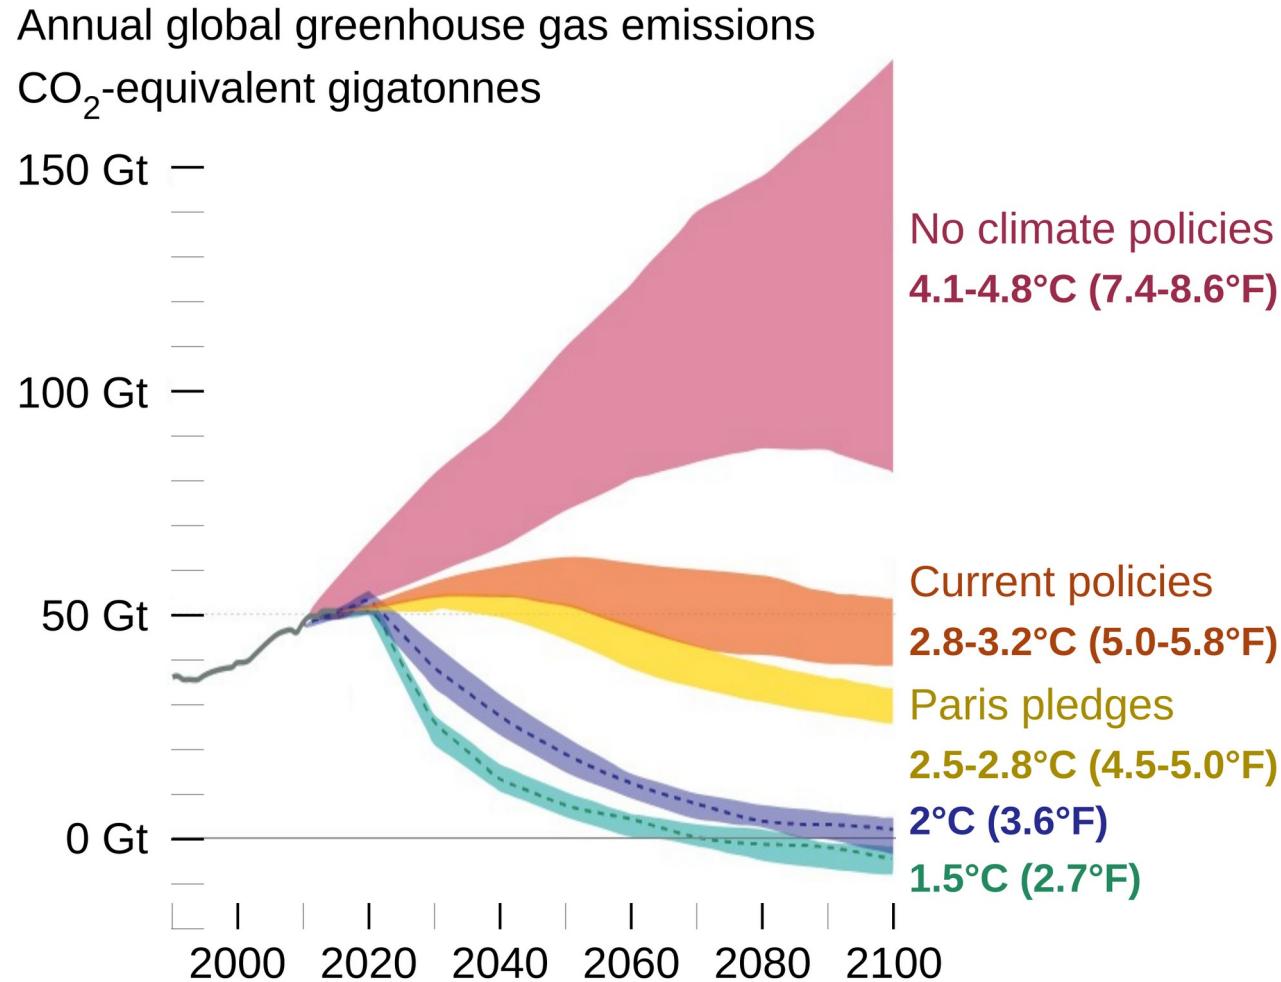

What is the Problem?

What is the Problem?

We only have one planet and we are ruining it.

There Is No Hope

“As a climate scientist, I am often asked to talk about hope. Particularly in the current political climate, audiences want to be told that everything will be all right in the end. [...]”

“Climate change is bleak, the organizers always say. Tell us a happy story. Give us hope. The problem is, I don’t have any. [...]”

“We are inevitably sending our children to live on an unfamiliar planet.”

We Need Courage

“But the opposite of hope is not despair. It is grief. Even while resolving to limit the damage, we can mourn. And here, the sheer scale of the problem provides a perverse comfort: we are in this together. The swiftness of the change, its scale and inevitability, binds us into one, broken hearts trapped together under a warming atmosphere.

We Need Courage

“But the opposite of hope is not despair. It is grief. Even while resolving to limit the damage, we can mourn. And here, the sheer scale of the problem provides a perverse comfort: we are in this together. The swiftness of the change, its scale and inevitability, binds us into one, broken hearts trapped together under a warming atmosphere.

We need courage, not hope. Grief, after all, is the cost of being alive. [...] Courage is the resolve to do well without the assurance of a happy ending.”

Question 5

- What percentage of the population needs to participate in peaceful protest/civil disobedience for political change, i.e., saving our planet?

→ Type your response in the poll field.

Question 5

- What percentage of the population needs to participate in peaceful protest/civil disobedience for political change, i.e., saving our planet?

→ Type your response in the poll field.

→ According to Prof. Erica Chenoweth 3.5%

→ Based on studying 323 violent and non-violent protests that occurred between 1900 and 2006 worldwide).

Basic Law for the Federal Republic of Germany

Article 20a - Protection of the natural foundations of life and animals

“Mindful also of its responsibility towards future generations, the state shall protect the natural foundations of life and animals by legislation and, in accordance with law and justice, by executive and judicial action, all within the framework of the constitutional order.”

German: *“Der Staat schützt auch in Verantwortung für die künftigen Generationen die natürlichen Lebensgrundlagen und die Tiere im Rahmen der verfassungsmäßigen Ordnung durch die Gesetzgebung und nach Maßgabe von Gesetz und Recht durch die vollziehende Gewalt und die Rechtsprechung.”*

WHAT IS THIS COURSE ALL ABOUT?

3 Key Challenges of the 21st Century

- 1) Climate change / adaption to climate change
- 2) Environmental pollution
- 3) Dwindling non-renewable resources

What Is This Course All About?

In a Nutshell

*This course is supposed to enable **YOU** to create a sustainable future for all of us and future generations.*

What Is This Course All About?

- Gaining an understanding of causes, dimensions, and the characterization of the 3 key challenge of the 21st century
 - Climate change / adaption to climate change
 - Environmental pollution
 - Dwindling non-renewable resources
- Critically assess available solutions
- Act before it is to late

What Is This Course All About?

Clausthal University of Technology - Research Profile

About us

Welcome to Clausthal University of Technology

TU Clausthal is a substantial producer of research and is exceptionally well connected both nationally and internationally. This is evidenced by its high volume of third-party resources and the many successful partnerships it maintains with universities, research institutions, and businesses in the region, across the country, and throughout the world. Around 80 professors, 4,000 students, and some 1,100 employees enjoy short distances between the places they need to be, one another's personal attention, and the varied landscapes of the Upper Harz amid sites of UNESCO World Heritage.

TU Clausthal is the most significant factor in the region's economy and its largest employer. There is close collaboration between the academic and private sectors, facilitating the journey from fundamental research to real-life applications. And the overarching theme across all this work is the **circular economy**. In comprehensively pursuing the principle of a resource-efficient, regenerative economic order, TU Clausthal is taking responsibility for the future. With climate change and digitalization under way, it aims to support the establishment of a sustainable society.

TU Clausthal's degree programs can often be found in the top tier of the CHE ranking. With approximately 40% of its students from outside Germany, representing more than 100 different countries, TU Clausthal is the epitome of internationalism. Alongside this cosmopolitanism, the cornerstones of the university's vision for the future comprise a pronounced focus on practical application, outstanding levels of attentive support for students, and the involvement of broader society.

TU Clausthal is divided into three faculties, 35 institutes, and six interdisciplinary research centers. Apart from its main location in Clausthal-Zellerfeld, the university has two additional sites, namely its Energy Campus in Goslar and the Drilling Simulator Celle – German Center for High Performance Drilling Technology and Automation.

Beyond that, students and employees enjoy the international atmosphere at Clausthal University of Technology, the extensive nature of the Harz Mountains and the over 60 different sports ranging from skiing to sailing and mountain biking offered by the Sports Institute.

Professor Dr. rer. nat. Joachim Schachtner
President of Clausthal University of Technology

ADDITIONAL INFORMATIONEN

[Our Vision at TU Clausthal](#)

[Facts](#)

TU Clausthal's research profile

Our research, teaching, and technology transfer are all part of the interdisciplinary endeavor to tackle the great challenge facing our society: to safeguard the sustainable supply of resources and advance the transformation of our energy system under the onset of climate change. The spotlight is on systemic approaches to the creation of a circular economy.

Next to its narrow definition as an economic order that minimizes waste, the circular economy also encompasses renewable energy and digital management of the whole system. Digitalization has special significance, since it is the only means by which industrial processes designed for the linear system can be successfully transformed to suit a circular one. The problem-solving work is grounded in the academic disciplines of mathematics and computer science, natural sciences, engineering, business, and economics. Additionally, combining knowledge of materials with understanding of processes is one of TU Clausthal's key capabilities, which radiates into all its research areas. The university has organized the totality of its research activities into four areas:

1. Sustainable Energy Systems
2. Raw-Materials Supply and Resource Efficiency
3. New Materials and Processes for Competitive Products
4. Digitalization for a Sustainable Society

Under the umbrella of the circular economy, interdisciplinary and closely dovetailed study is engaged in within and across the research areas. The six research centers at TU Clausthal provide an ideal platform for this in practice. The research areas and the focused, consistent work on their continuous strategic development form the basis of our university's outstanding visibility on the national and international stage.

The holistic view inherent in the circular economy addresses not only technological but also behavioral and economic issues. The three dimensions of sustainability – environmental, social, and economic – are essential to the transition of our energy and raw-materials systems and to the necessary transformation of society. For that to succeed, public approval of the proposed technological solutions and sustainable business models is indispensable. This aspect is actively included in the processes of research and technology-transfer as well as teaching at TU Clausthal.

What This Course Is Not

- A comforting fairy tale of:
 - “Everything will be fine”
 - “Business as usual is sufficient”
 - “Just make this minor change to your daily lifestyle and recycle plastic bags”
- A soothing high-definition TikTok video
- A place to discuss whether climate change is “real”

What Is This Course All About?

Strategy

Strategy is “turning resources you have into the power you need to get what you want → your goal. [Marshall Ganz]

What Is This Course All About?

Strategy

Strategy is “turning resources you have into the power you need to get what you want → your goal. [Marshall Ganz]

- Strategic Goal (what you want): The goal is a clear, measurable point that allows you to know if you've won or lost, and that meets the challenge your constituency faces.

What Is This Course All About?

Strategy

Strategy is “turning resources you have into the power you need to get what you want → your goal. [Marshall Ganz]

- Strategic Goal (what you want): The goal is a clear, measurable point that allows you to know if you've won or lost, and that meets the challenge your constituency faces.
- Power (what you need): tactics through which you can turn your resources into the capacity you need to achieve your goal.

What Is This Course All About?

Strategy

Strategy is “turning resources you have into the power you need to get what you want → your goal. [Marshall Ganz]

- Strategic Goal (what you want): The goal is a clear, measurable point that allows you to know if you've won or lost, and that meets the challenge your constituency faces.
- Power (what you need): tactics through which you can turn your resources into the capacity you need to achieve your goal.
- Resources (what your constituency has): time, money, skills, relationships, etc.
