EXERCISES E04 - E05

Exercise E04

National Sustainability Discourse

- You chose articles and reported how sustainability is discussed in the following countries:
 - India
 - Ukraine
 - Russia
 - Saudi Arabia
 - Brazil
 - Germany

Exercise E04

National Sustainability Discourse

Country	Your Assessemnt	CCPI 2023
India	<ul style="list-style-type: none">“Indian government considers sustainability to be an important national issue”“India has been giving importance to maintaining a sustainable environment”	Rank: 8 High Rating
Ukraine	<ul style="list-style-type: none">“sustainability is a political priority of Ukraine since 2015”	Not ranked due to the war (2022: Rank: 20)
Russia	<ul style="list-style-type: none">“I don't feel that sustainability is an important topic in society or in government”“Speaking about Russia in general, sustainability is not a major political priority for now”	Rank 59 Very Low
Saudi Arabia	<ul style="list-style-type: none">“Sustainability was not a political priority in Saudi Arabia, although in more recent times it has been aiming to be better involved in it, and has been trying to rebrand itself as a greener country”	Rank: 62 Very Low
Brazil	<ul style="list-style-type: none">“Sustainability is a political priority to varying degrees”	Rank: 38 Low

Exercise E05

Your Suggestions for Policy Actions

- Industrialization:
 - “The most important thing for this scenario is probably to deliberately slow down the growth of industrialization. It is this sector that has the greatest impact on the amount of pollution and the amount of use of natural resources.”
- Resources and Energy Sources:
 - “resort to more sustainable sources of resources, like renewable energy”
 - “We could invest heavily in research for new technologies to reduce pollution and use our resources more efficiently.”
 - “Better distribution of resources across the world”
 - “100 percent renewable energy without fossil or atomic energy”
- Food Stability/ Poverty:
 - “We focus on the Food sector and trying to beat poverty and starvation”
 - “We could prohibit the consumption of meat.”

INTRODUCTION

Introduction

Sustainability - Definition

„Development that meets the needs of the present without compromising the ability of future generations to meet their own needs.“

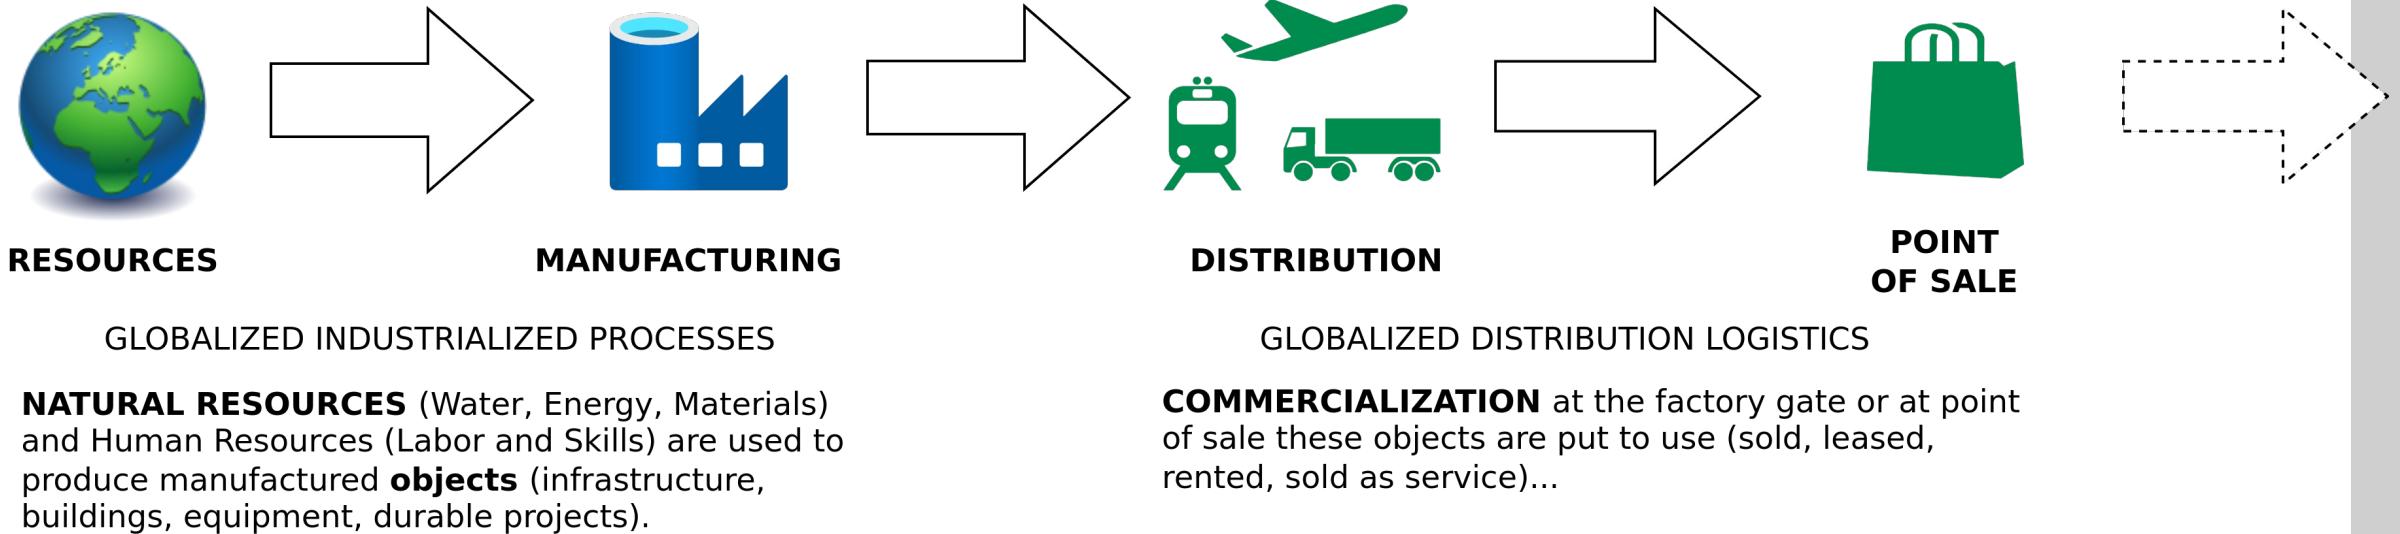

Introduction

Sustainability - Implications

Sustainability → Consume less

Introduction

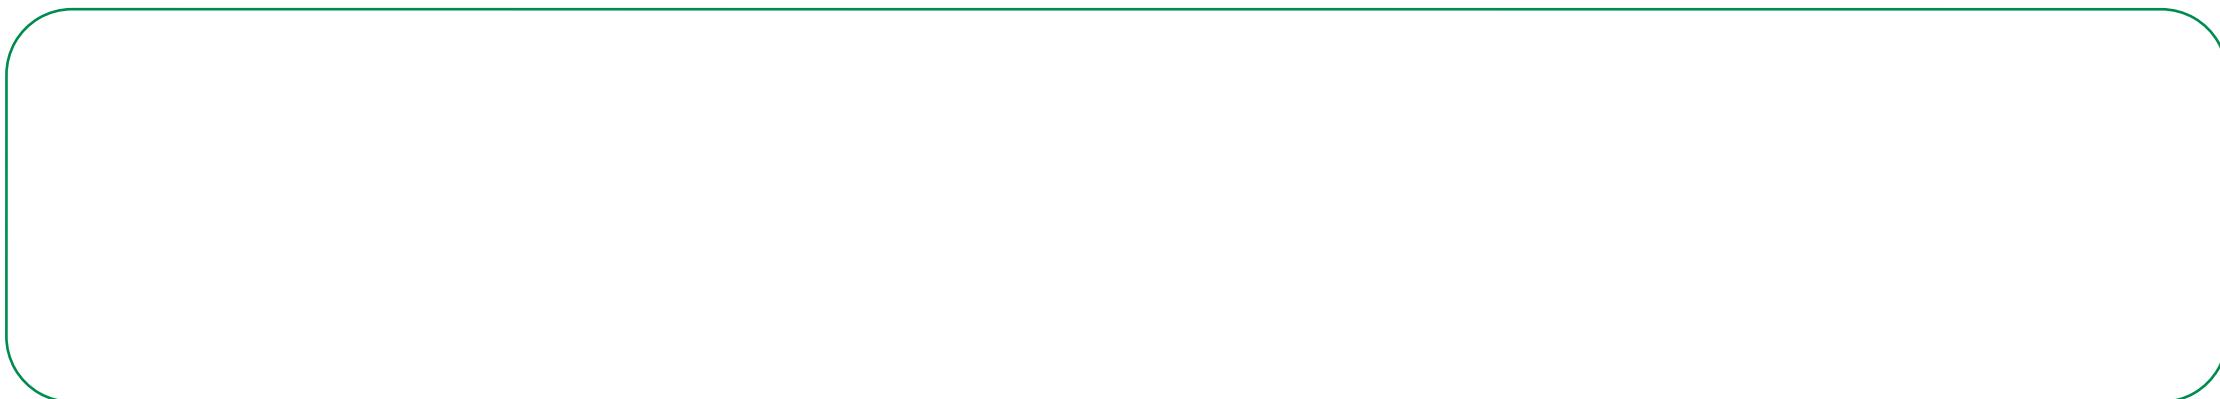

Linear (Industrial) Economy

Introduction

Linear Economy

Introduction

Linear Economy

“Take – Make – Dispose”

Introduction

Linear (Industrial) Economy – Definition

“Its objectives are to **maintain value** (not to create value added), to **optimise stock** management (not flows) and to **increase the efficiency of using goods** (not of producing goods)”

Introduction

Linear (Industrial) Economy - Waste Management as last Step

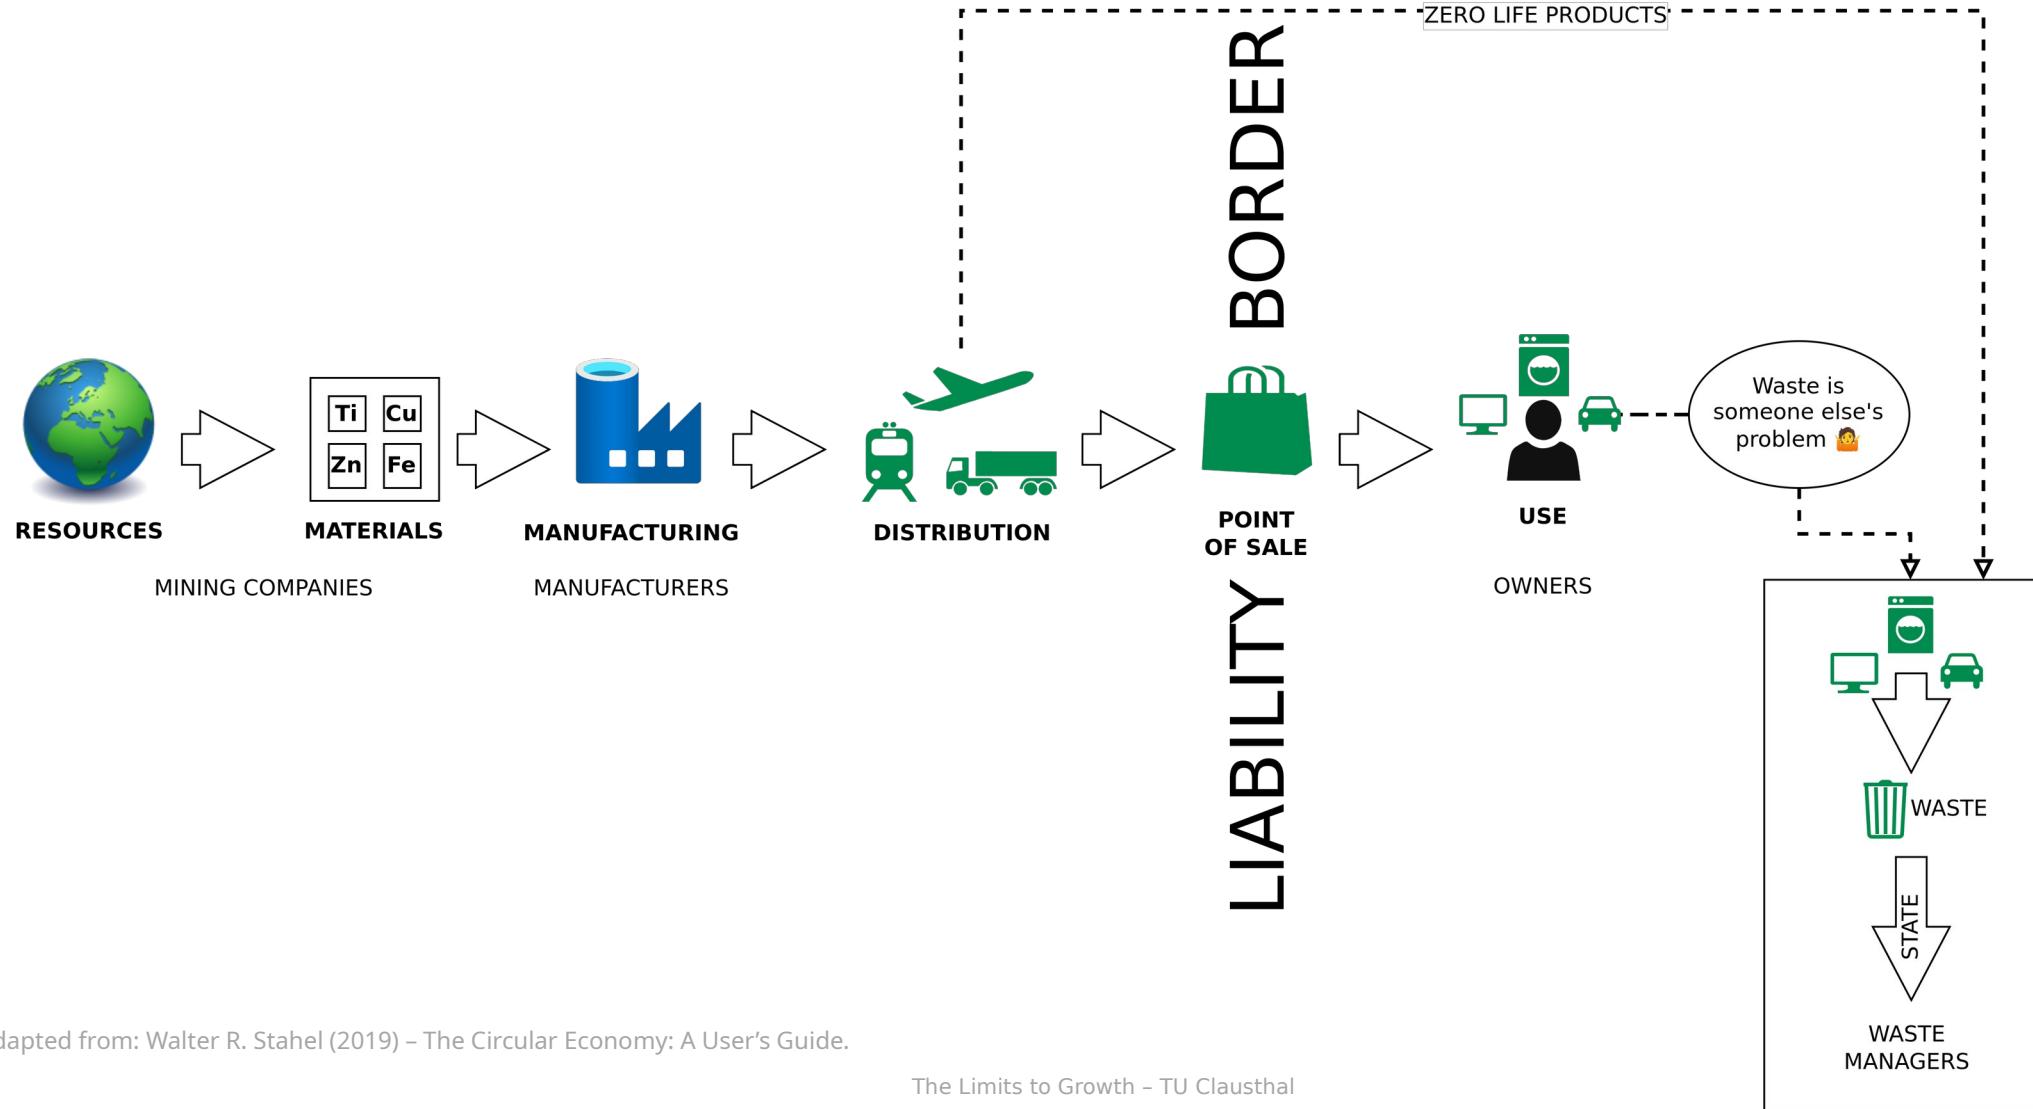

Image adapted from: Walter R. Stahel (2019) – The Circular Economy: A User's Guide.

Introduction

Horrible Waste Management

1. "Landfill at Upernivik" by ulalume - <https://www.flickr.com/photos/96649248@N00/43867280734> - CC BY-NC-ND 2.0.

2. Christian Hüpfer - <https://flic.kr/p/aKXw2F> - CC BY-SA 2.0.

Introduction

Horrible Waste Management - Nuclear Waste

Introduction

Horrible Waste Management - Nuclear Waste

- 2 generations profited from cheap nuclear energy
- 40,000 generation will have to live with the waste

Introduction

Horrible Waste Management - Plastic

Introduction

The Limits to Recycling

- Recycling often requires a lot of energy
- Some materials cannot be recycled at all (yet)
- Impurities are challenging
- Often requires a lot of manual labor
- Recycled material often with lower quality than input material
- False sense of safety!

I am not saying you should stop recycling!

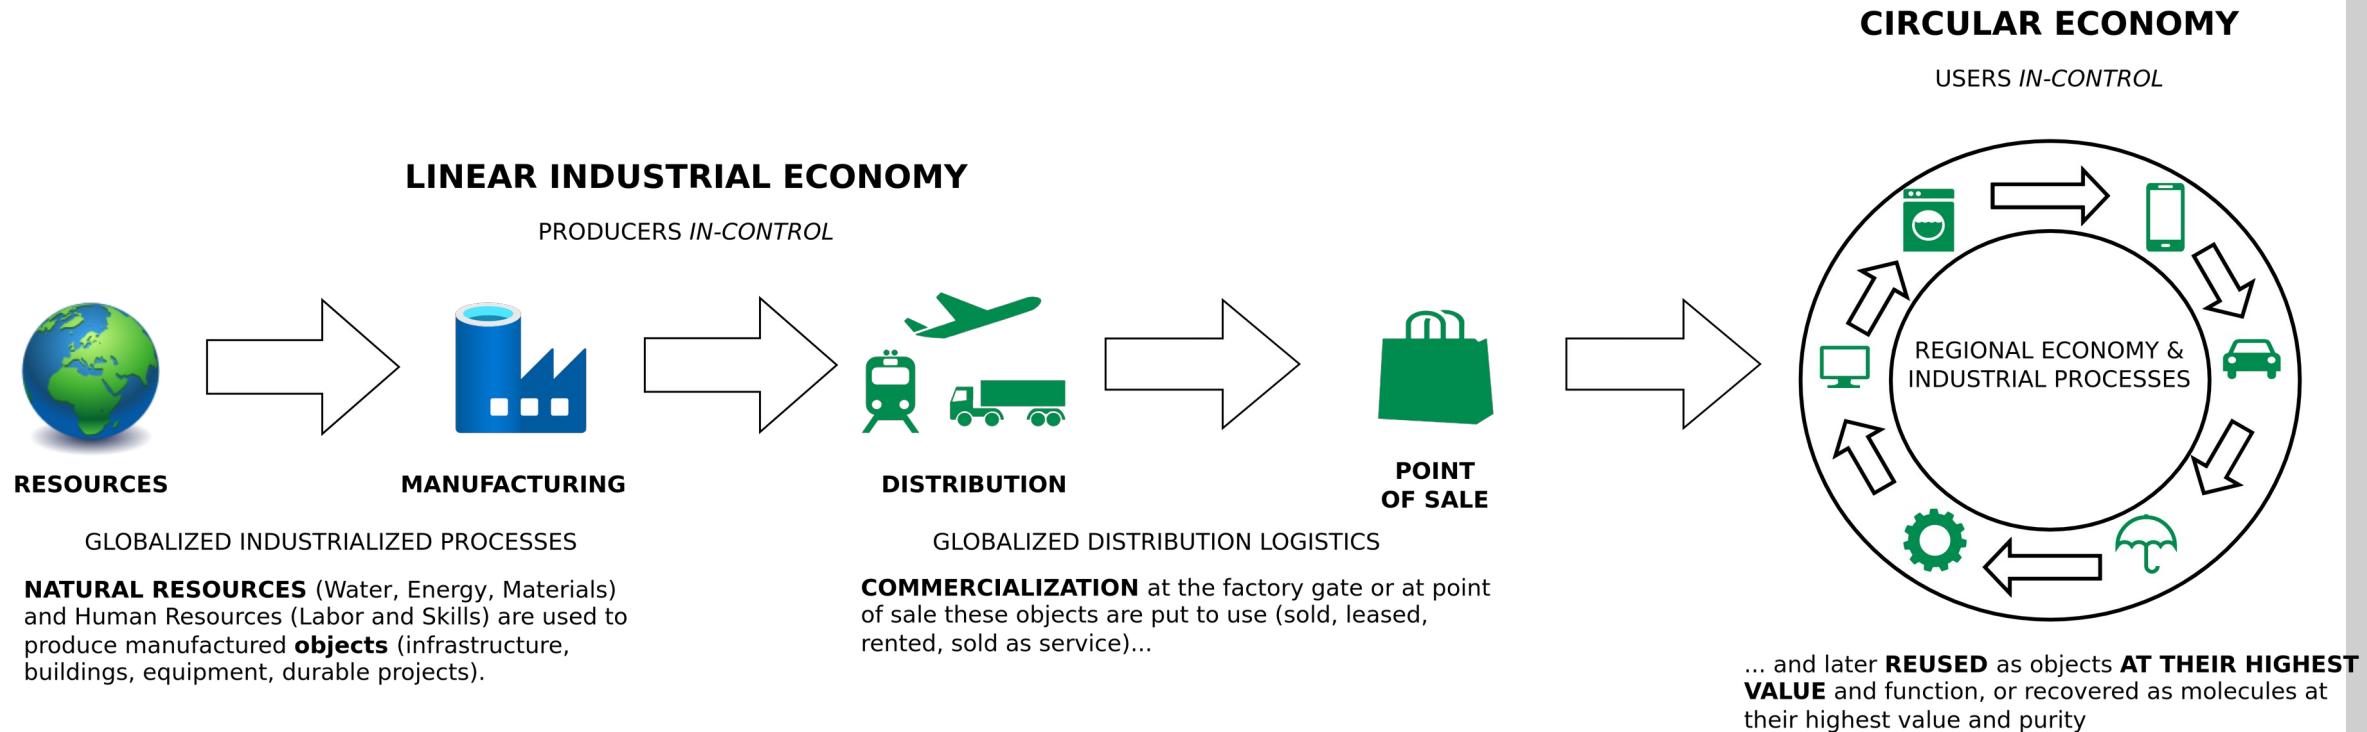

→ Recycling is great but it is better to make sure that we do not have to recycle anything.
→ Buying less (e.g., only the essentials) is way more effective.

*"We buy things we don't need, to impress people we don't like." -
Tyler Durden / Chuck Palahniuk*

Waste = Inefficiency

Introduction

From Linear to Circular

Introduction

Linear Economy - Main Challenges

- Environmental pollution / waste
- Waste of resources
 - → Just recycling is not gonna do it

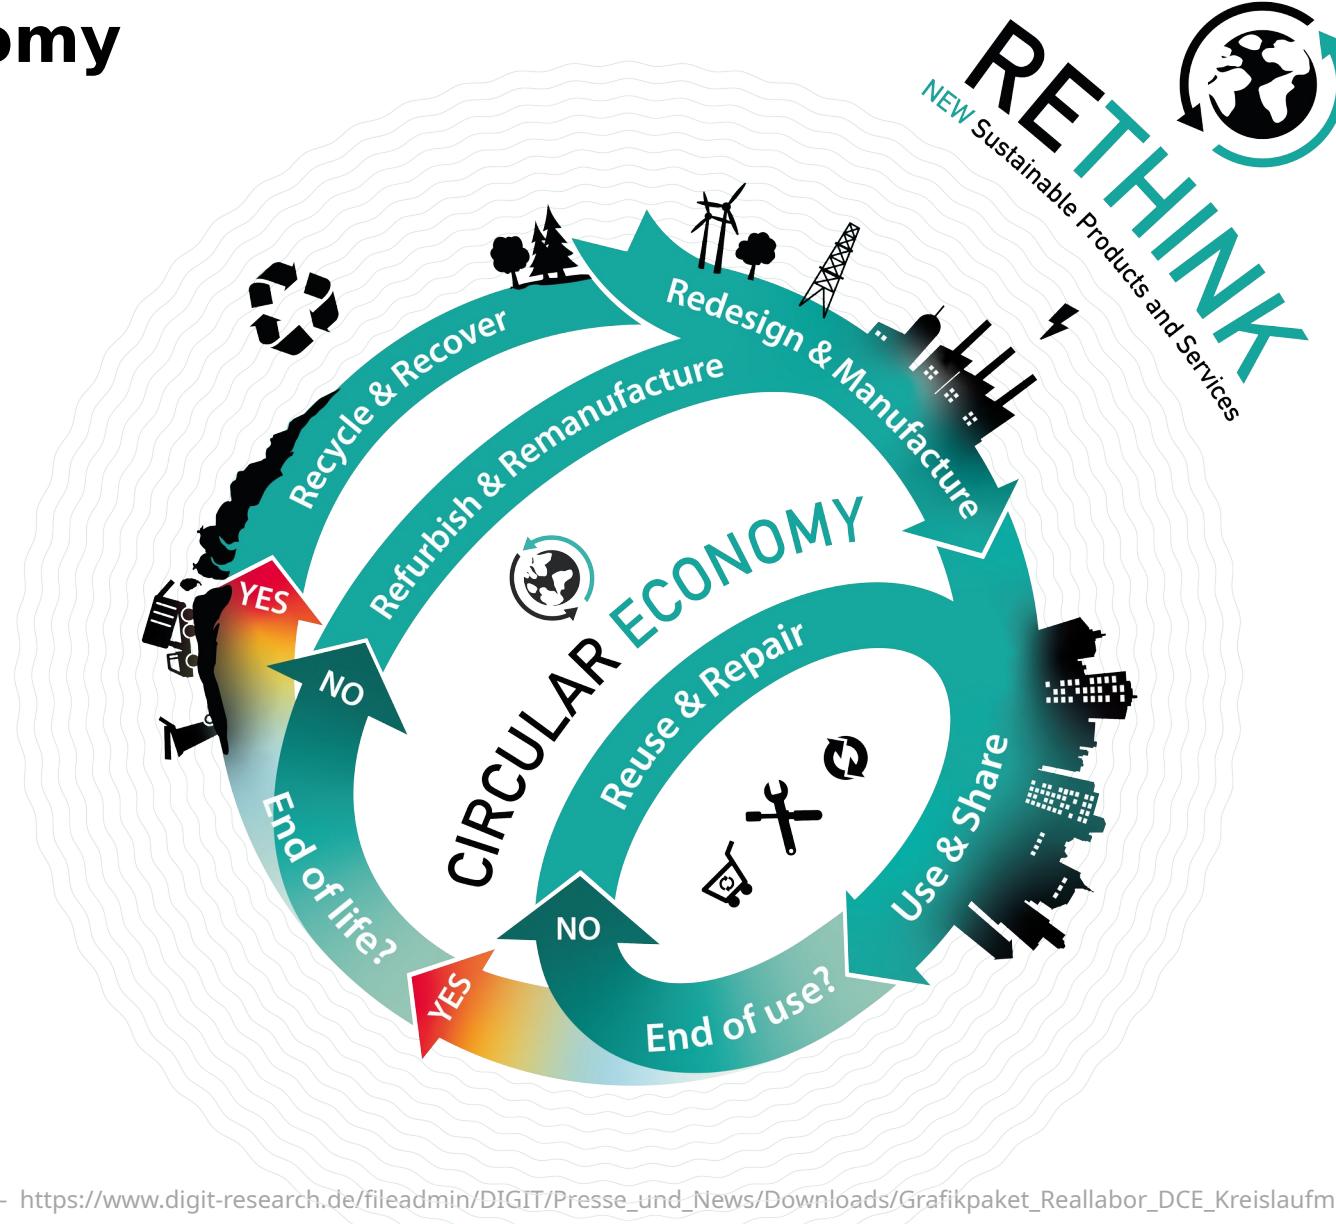

Introduction

Linear Economy - Main Challenges

- Environmental pollution / waste
- Waste of resources
 - → Just recycling is not gonna do it
- Therefore:
 - Consume less
 - Make stuff last longer
 - Maximize resource utilization

THE CIRCULAR ECONOMY

Circular Economy

Circular Economy

Definition

“Conceptualizing the circular economy: An analysis of 114 definitions.”

Kirchherr, Julian, Denise Reike and Marko P. Hekkert. Resources Conservation and Recycling 127 (2017): 221-232.

<https://doi.org/10.1016/J.RESCONREC.2017.09.005>

Circular Economy

Definition

“A circular economy is an industrial system that is restorative or regenerative by intention and design. It replaces the ‘end-of-life’ concept with restoration, shifts towards the use of renewable energy, eliminates the use of toxic chemicals, which impair reuse, and aims for the elimination of waste through the superior design of materials, products, systems, and, within this, business models.”

– Ellen MacArthur Foundation

Circular Economy

Definition

“A circular economy is an industrial system that is restorative or regenerative by intention and design. It replaces the ‘end-of-life’ concept with restoration, shifts towards the use of renewable energy, eliminates the use of toxic chemicals, which impair reuse, and aims for the elimination of waste through the superior design of materials, products, systems, and, within this, business models.”

– Ellen MacArthur Foundation

“The circular economy is a model of production and consumption, which involves sharing, leasing, reusing, repairing, refurbishing and recycling existing materials and products as long as possible. In this way, the life cycle of products is extended.”

– European Parliament

Circular (Industrial) Economy

Definition

“The circular industrial economy **manages stocks** of manufactured assets, such as infrastructure, buildings, vehicles, equipment and consumer goods, to **maintain their value and utility as high as possible for as long as possible**; and stocks of **resources at their highest purity and value.**”

Circular Economy

Sustainability - Definition

„Development that meets the needs of the present without compromising the ability of future generations to meet their own needs.“

Circular Economy

Characteristics

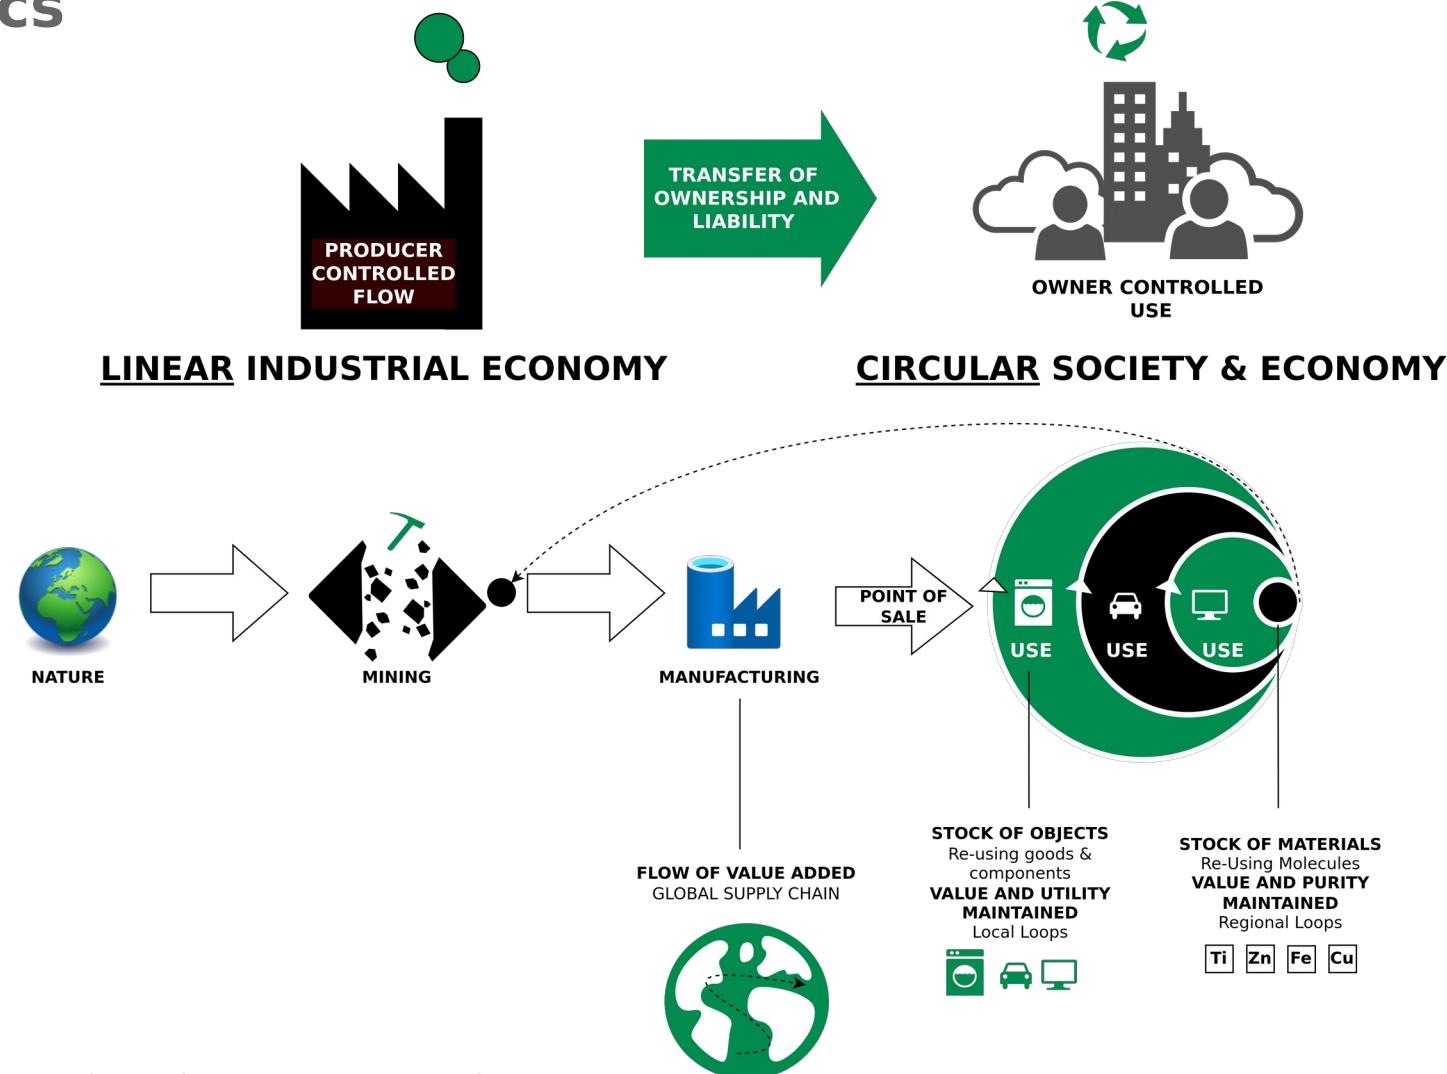

Image adapted from: Walter R. Stahel (2019) – The Circular Economy: A User's Guide.

Circular Economy

The Era of R

Techno-commercial strategies to keep goods and components at highest value level through:

- **Reuse**
- **Repair**
- **Remarket**
- **Remanufacture**
- **Re-refine**
- **Reprogramme goods**

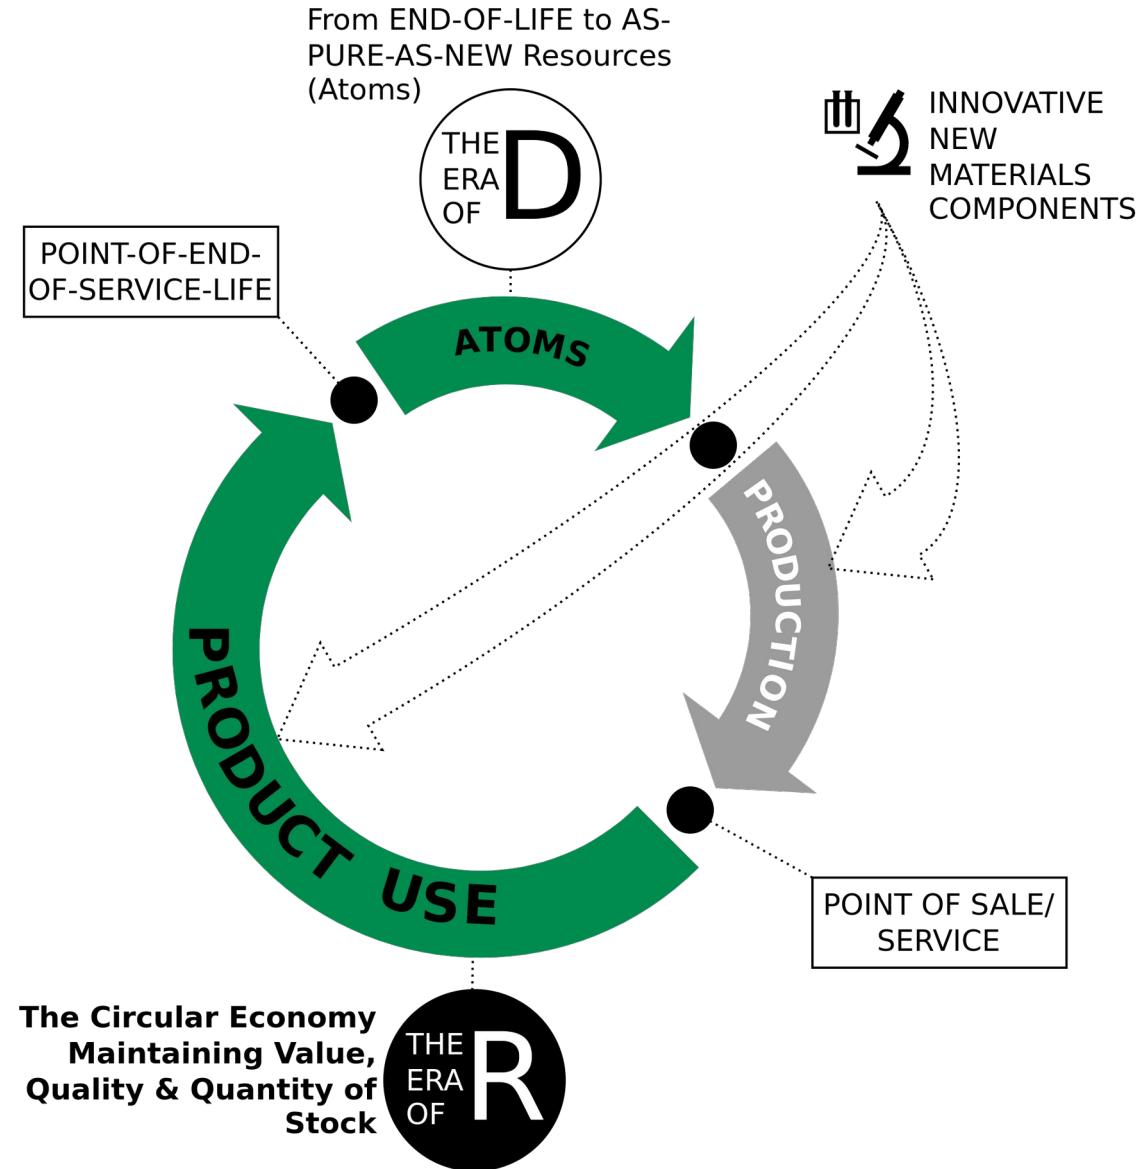

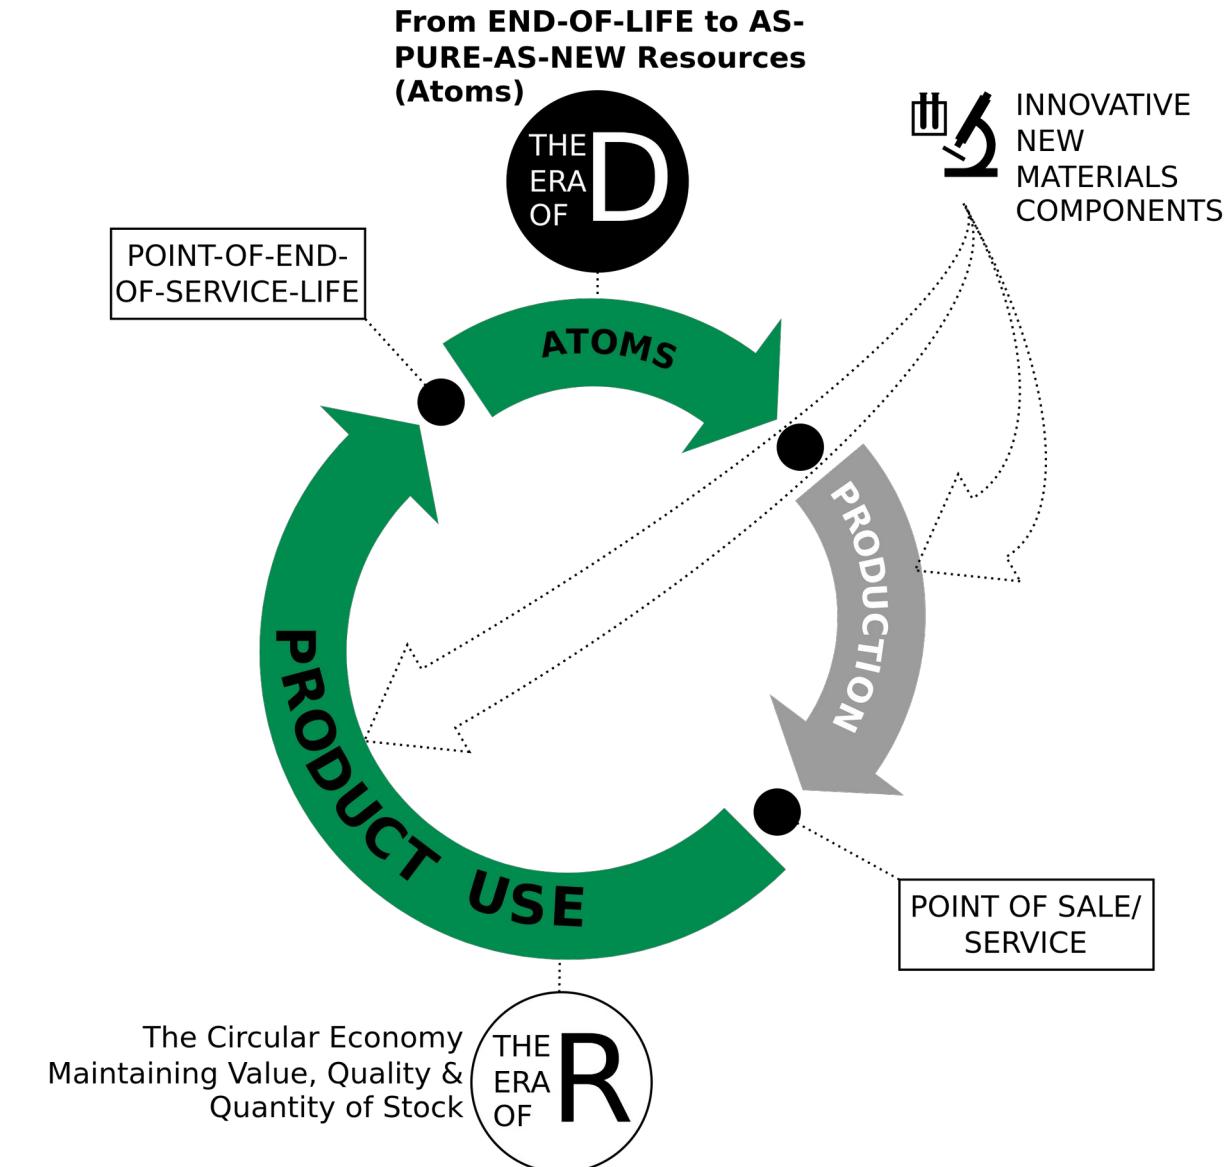

Image adapted from Walter R. Stahel (2019) – The Circular Economy: A User's Guide.

Circular Economy

The Era of D

Technologies and actions to recover atoms and molecules at highest quality (purity and value) level as pure as virgin:

- **D**e-polymerise
- **D**e-alloy
- **D**e-laminate
- **D**e-vulcanise
- **D**e-coat materials
- **D**e-construct high-rise buildings and major infrastructure

Circular Economy

End-of-Life - Reuse or Recycle?

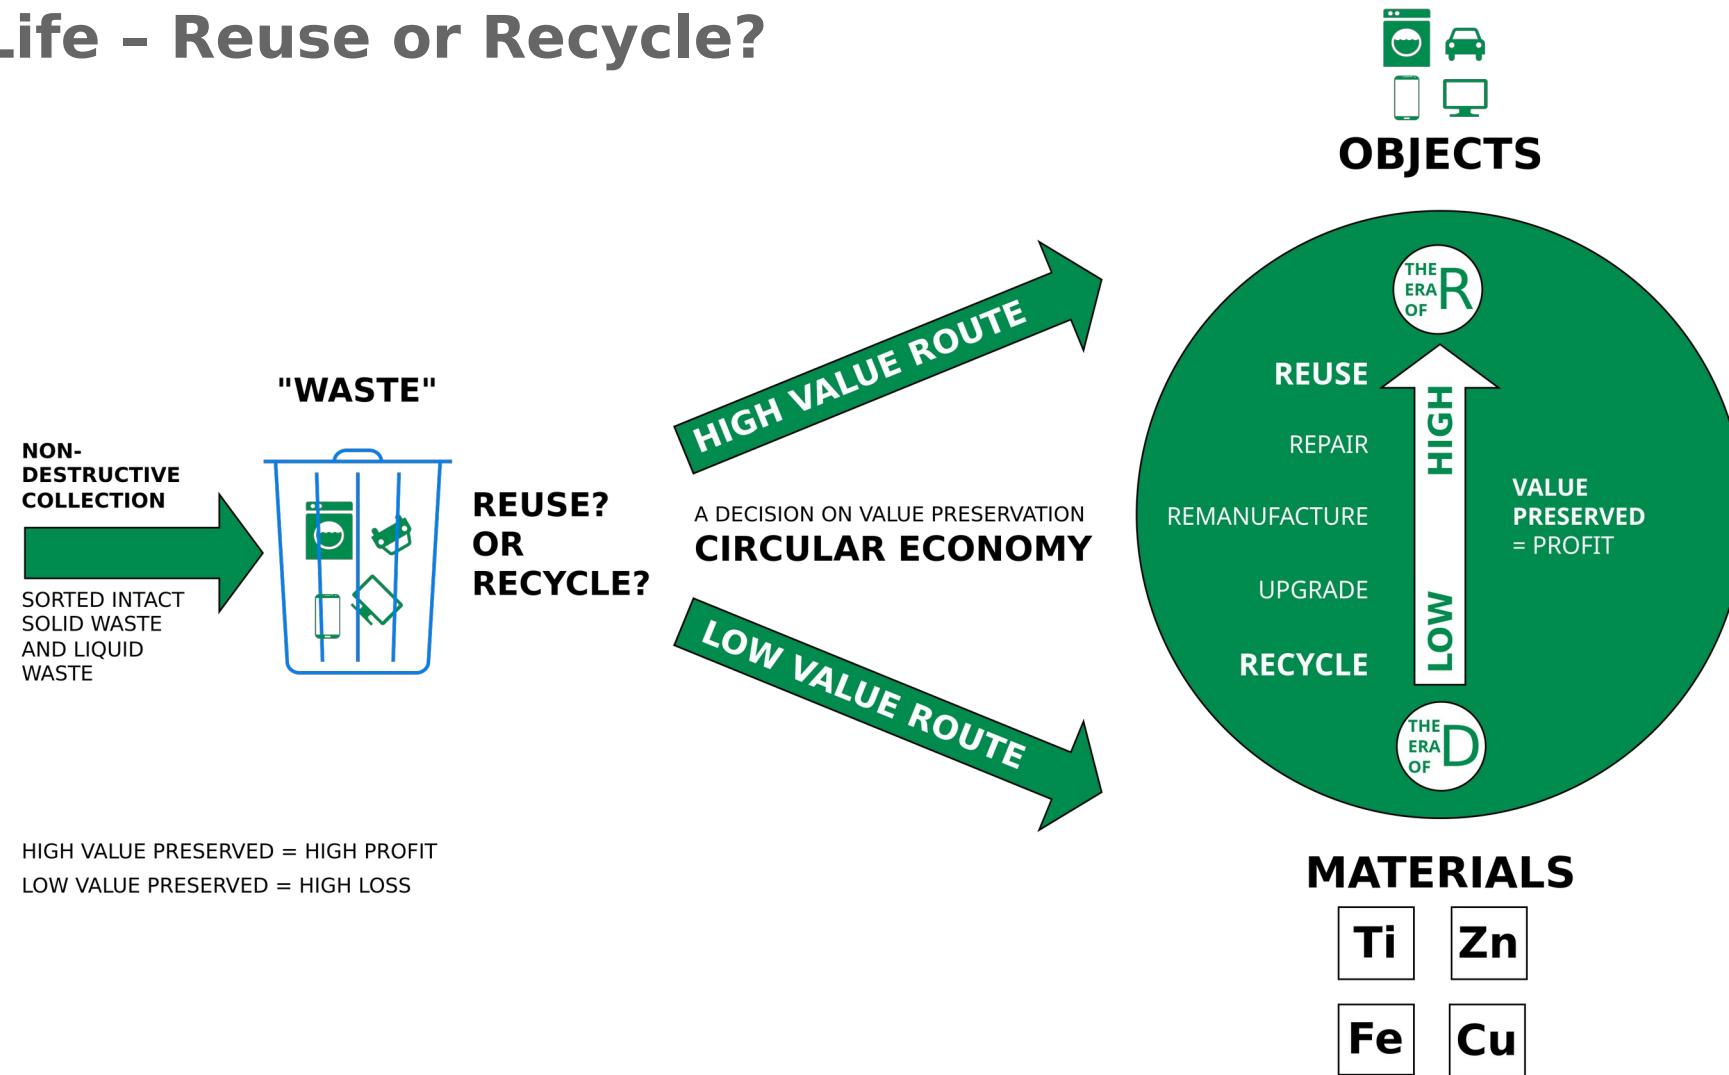

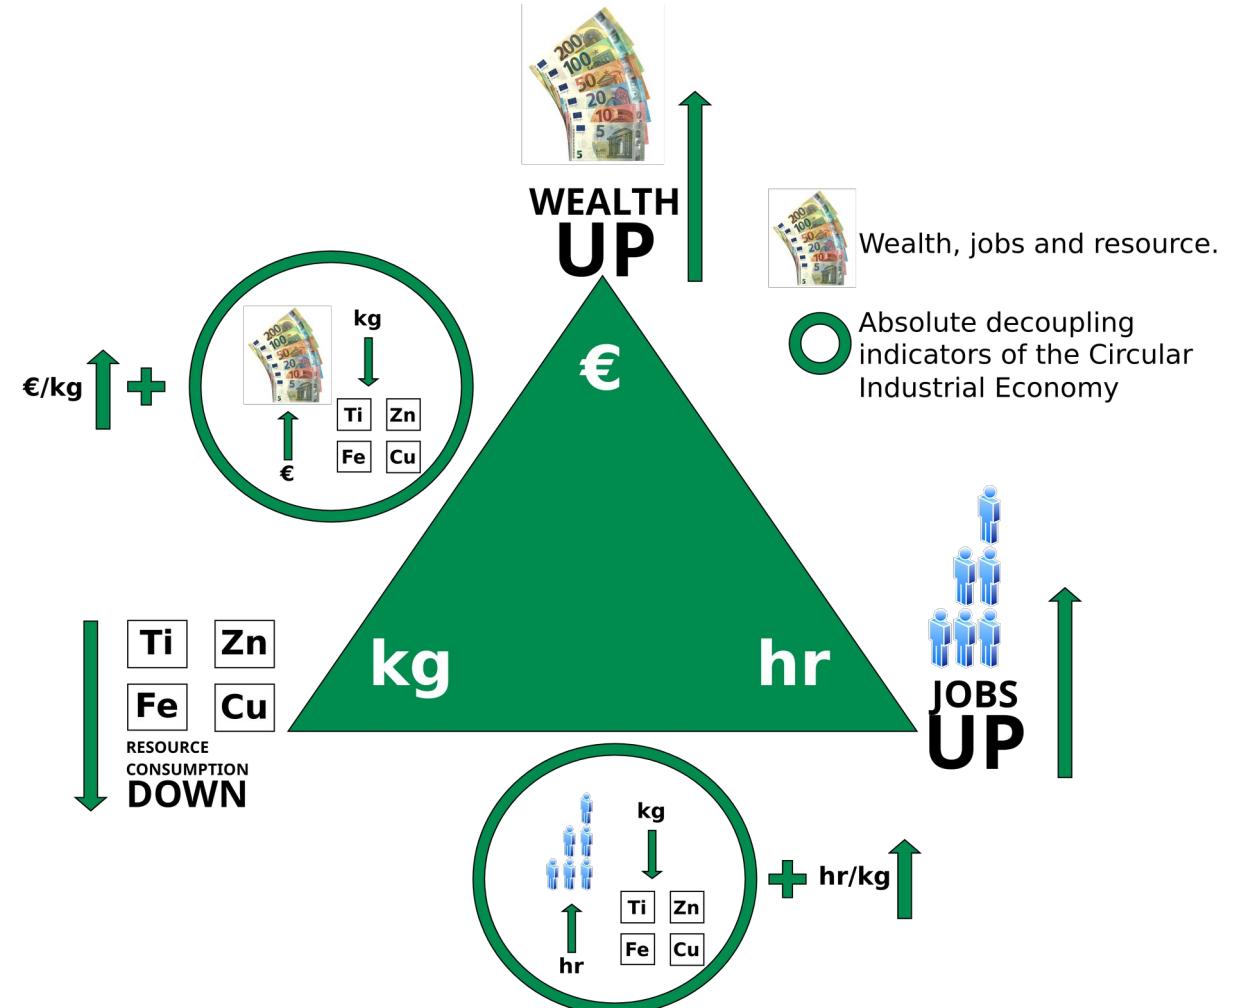

Image adapted from Walter R. Stahel (2019) – The Circular Economy: A User's Guide.

Circular Economy

More Wealth/Jobs From Less Resource Consumption

- **Linear Economy:** Low hr/kg (labor input per weight) ratios, coherent with mass production in highly mechanized processes, and low to medium €/kg (value per weight) ratios, in a range from basic materials like cement to smart goods like USB memory sticks

- **Circular Economy:** Higher hr/kg and €/kg ratios for reuse, remanufacture and selling performance (goods as a service), in a group with new technologies, such as life sciences and nanotechnologies, which by nature produce dematerialized objects.

Circular Economy

New Engine vs. Remanufacturing A Car Engine

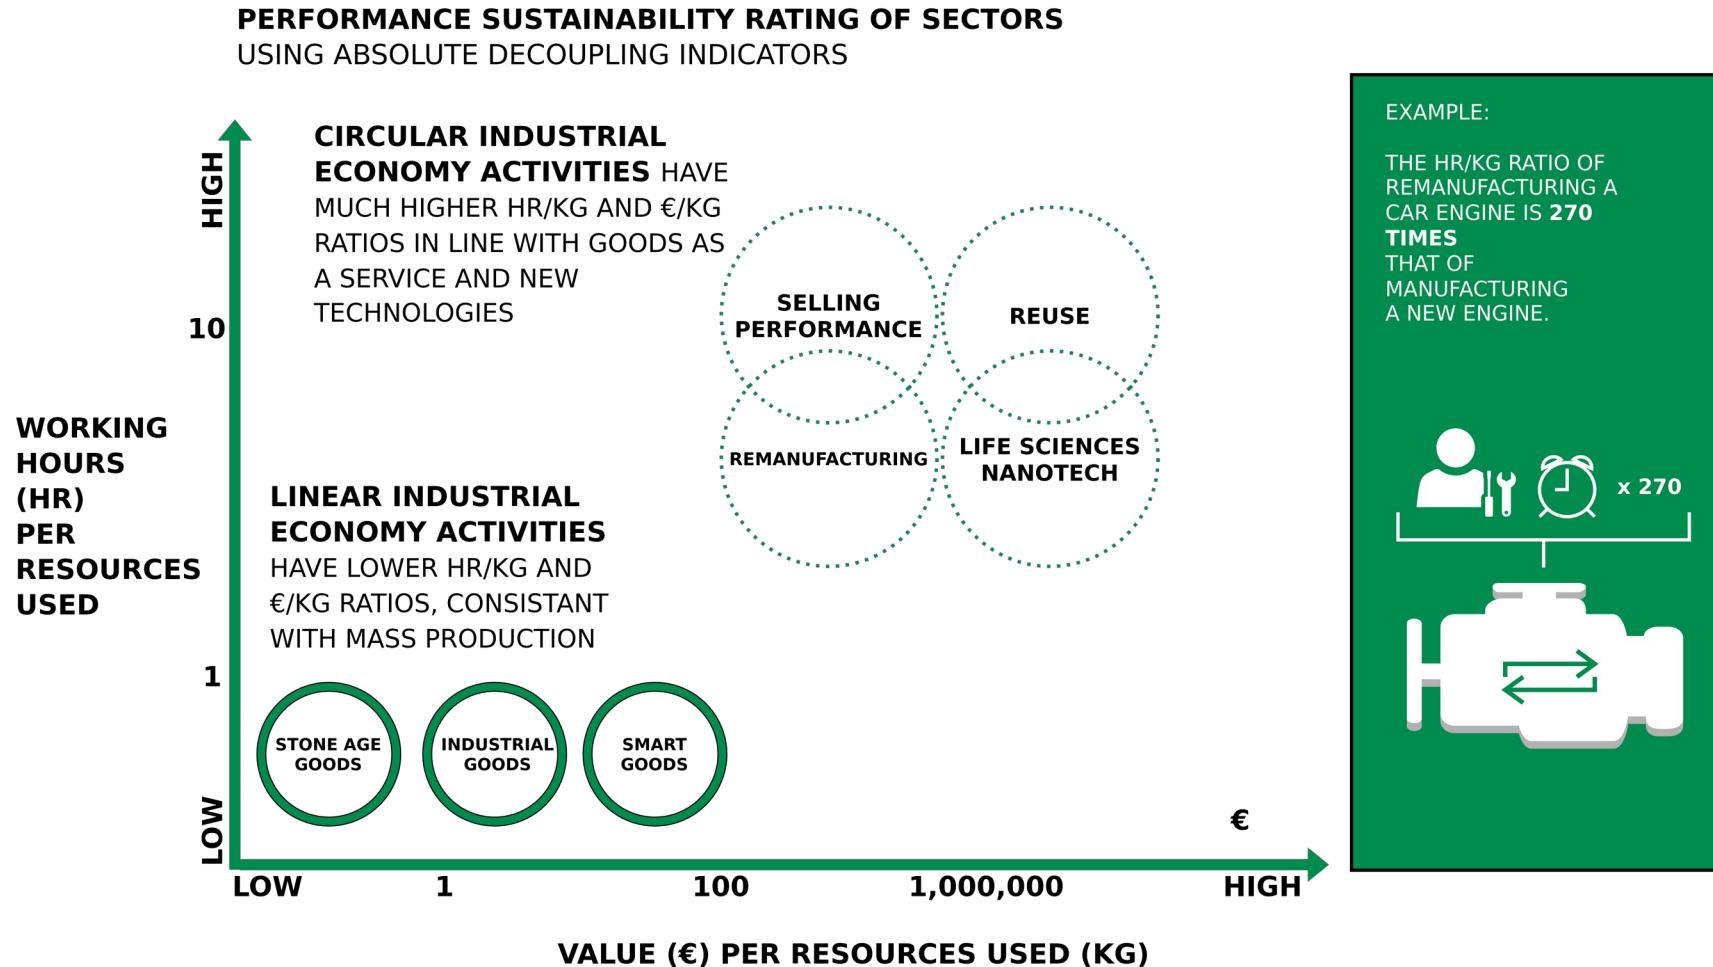

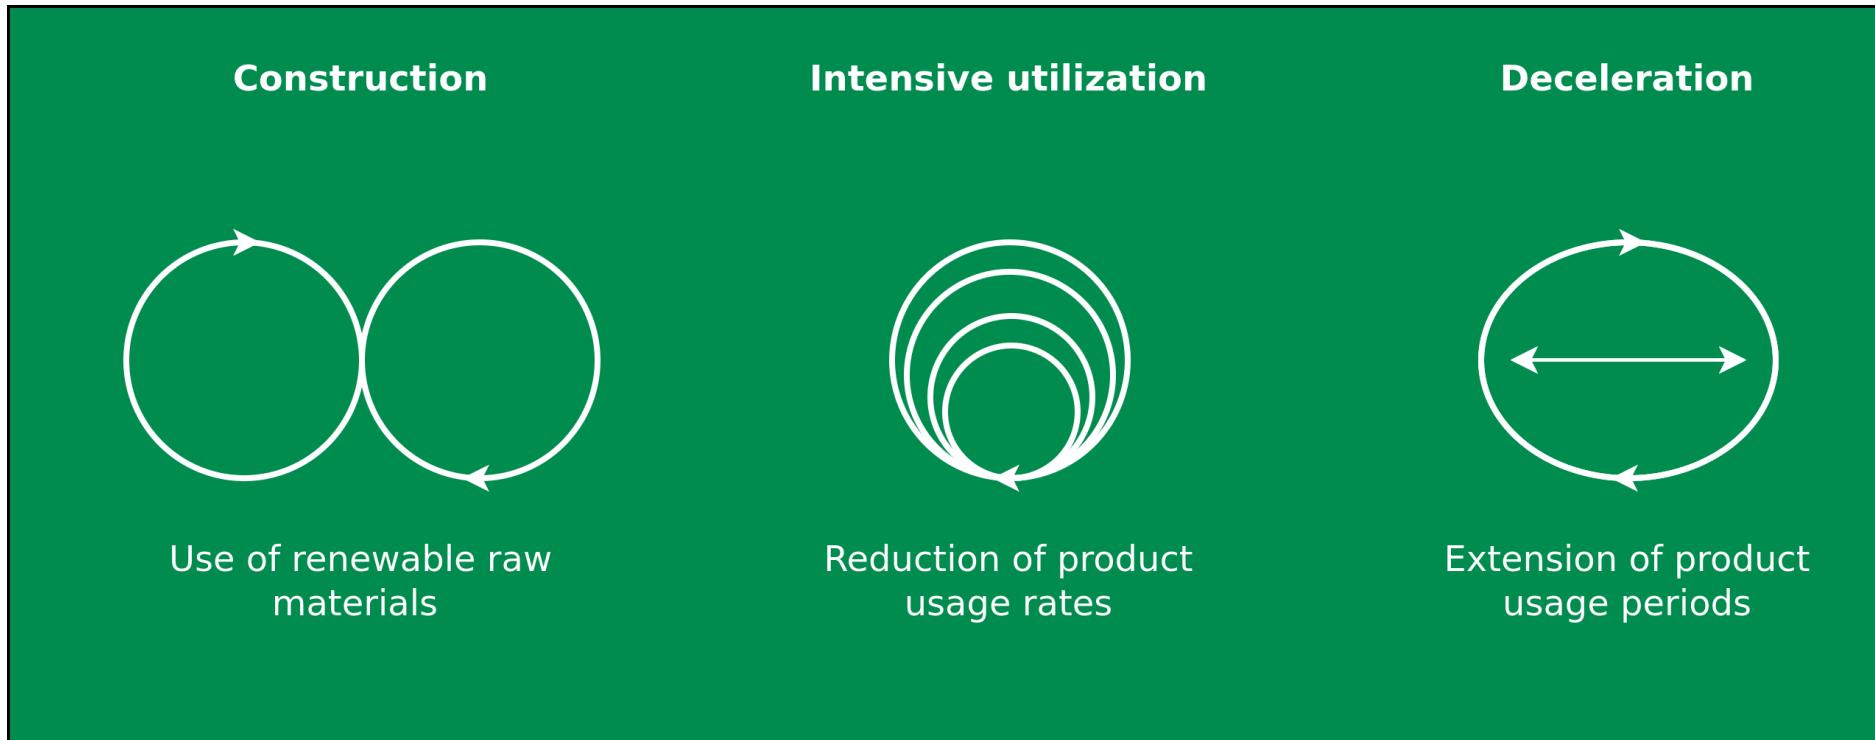

Image adapted from Walter R. Stahel (2019) – The Circular Economy: A User's Guide.

Circular Economy

Business Model Characteristics

Circular Economy

BUSINESS MODEL TOPOLOGY OF THE CIRCULAR ECONOMY

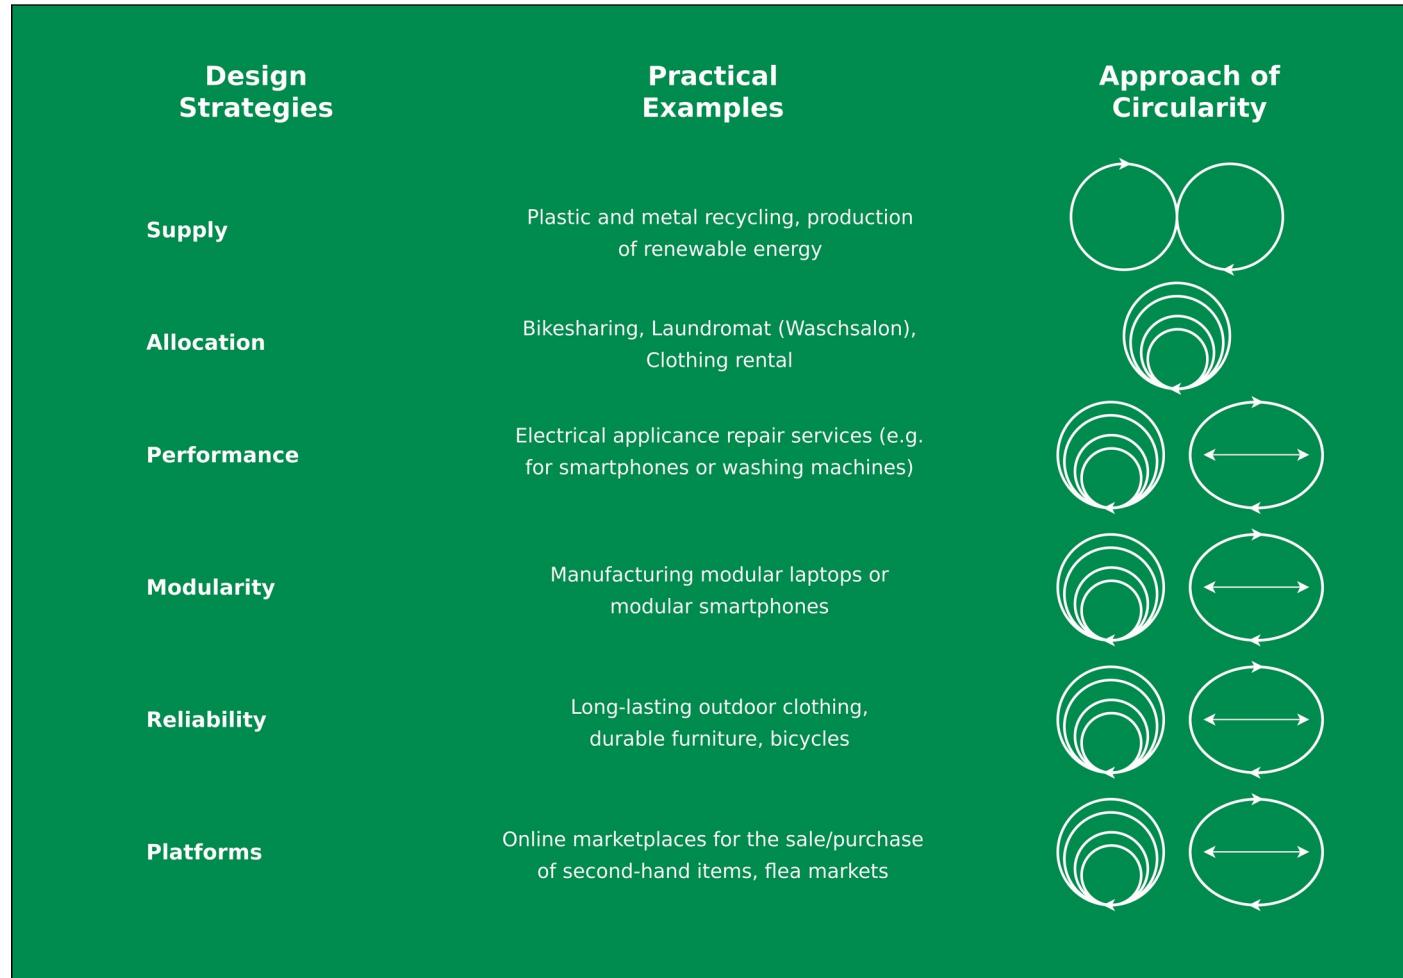

Image adapted from: M. Jaeger-Erben, F. Hofmann (2019) – Kreislaufwirtschaft - Ein Ausweg aus der sozial-ökologischen Krise? – [Link](#).

PERFORMANCE ECONOMY

Performance Economy

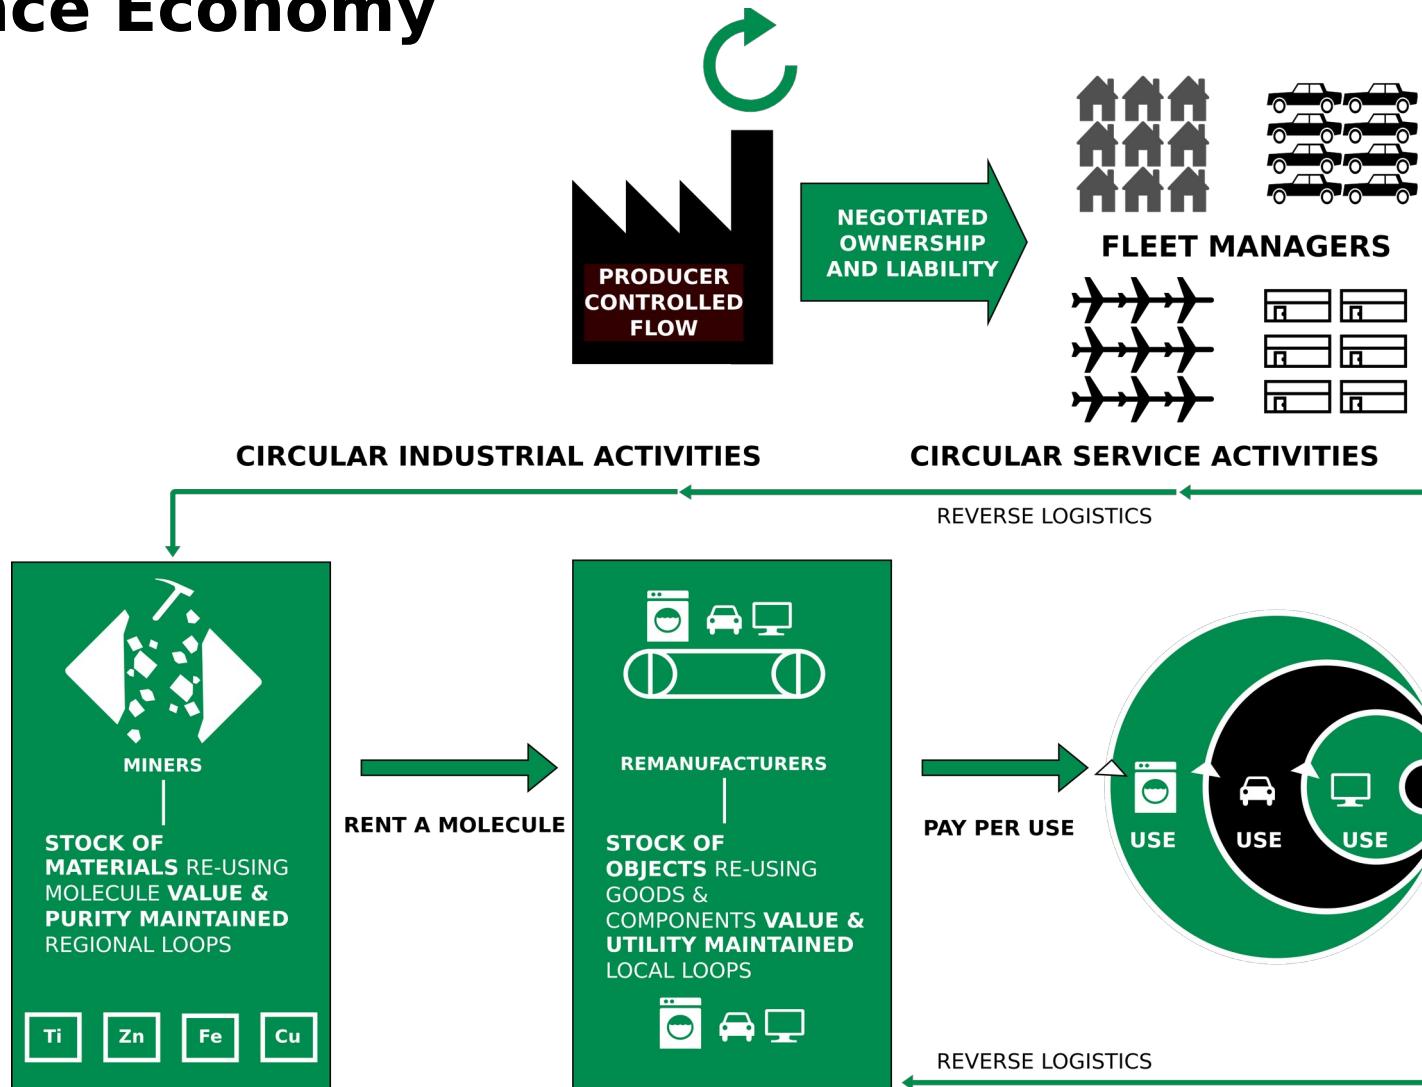

Image adapted from Walter R. Stahel (2019) – The Circular Economy: A User's Guide.

Performance Economy - Definition

„**The Performance Economy sells results instead of objects.** Its economic actors may be manufacturers of durable objects or fleet managers operating them. In both cases, they sell the use of these objects as a service over the longest possible period of time and maximize their profits by exploiting both efficiency and sufficiency solutions. “

Performance Economy - Most sustainable CE business model?

- Stahel argues:
 - “The Performance Economy of selling goods and molecules as a service, function guarantees or results and performance, is the most sustainable business model of the circular industrial economy because by internalising the costs of product liability, of risk and waste, it offers manufacturers a strong financial incentive to prevent losses and waste.”

Performance Economy - Most sustainable CE business model?

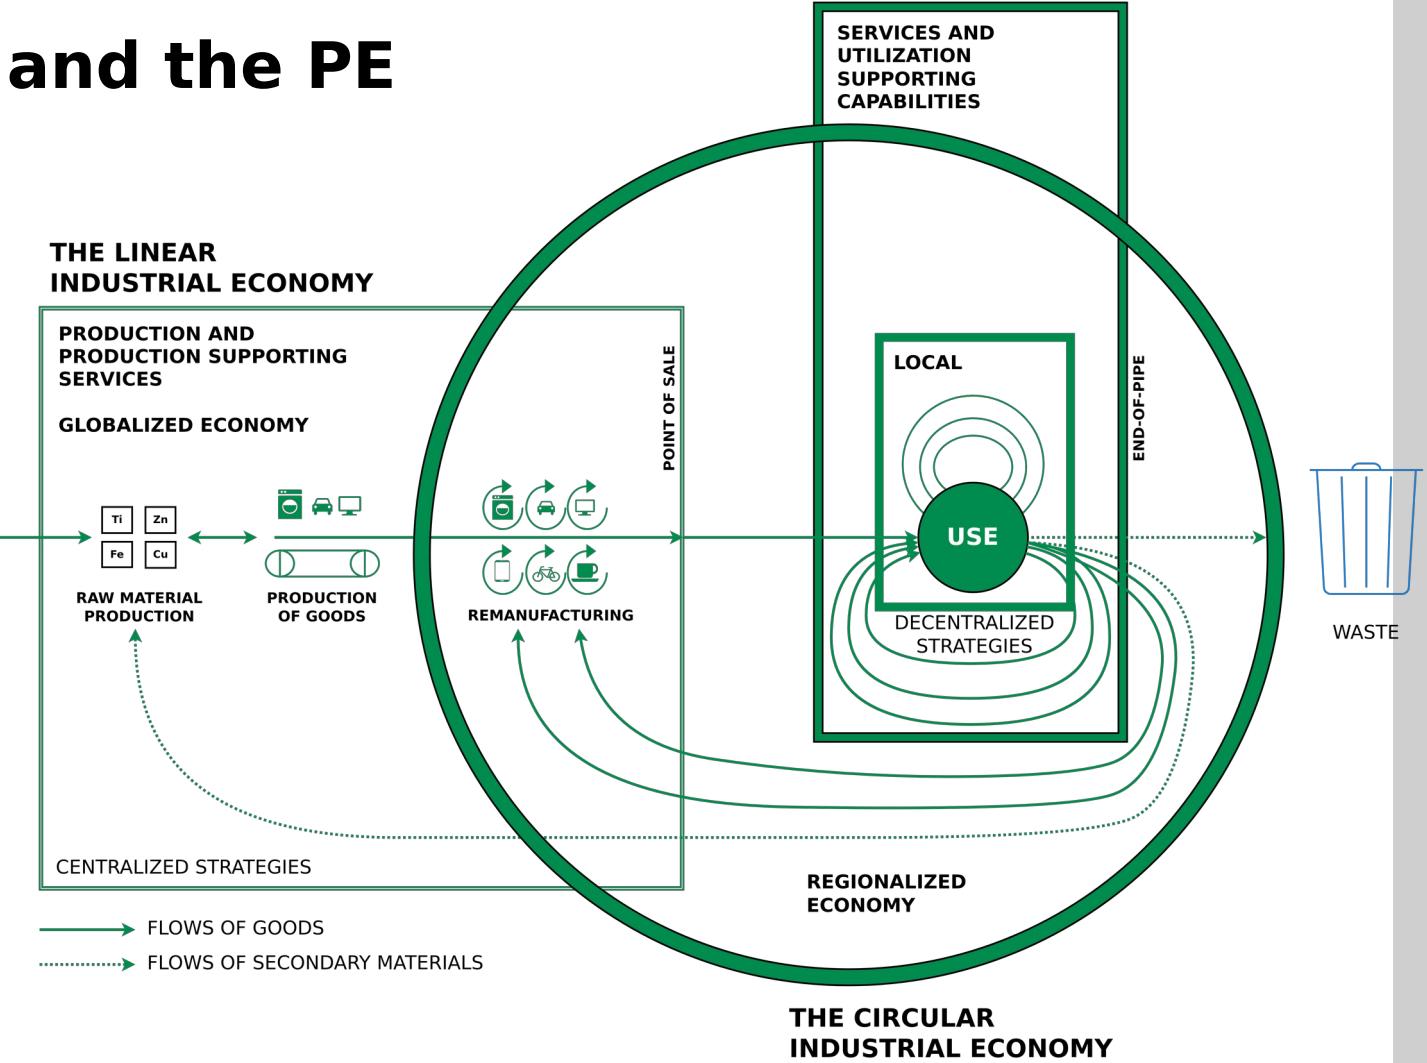

- Stahel argues:
 - “The Performance Economy of selling goods and molecules as a service, function guarantees or results and performance, is the most sustainable business model of the circular industrial economy because by internalising the costs of product liability, of risk and waste, it offers manufacturers a strong financial incentive to prevent losses and waste.”
 - “It maximises the profit potential by exploiting sufficiency, efficiency and systems solutions.”

Performance Economy - Most sustainable CE business model?

- Stahel argues:
 - “The Performance Economy of selling goods and molecules as a service, function guarantees or results and performance, is the most sustainable business model of the circular industrial economy because by internalising the costs of product liability, of risk and waste, it offers manufacturers a strong financial incentive to prevent losses and waste.”
 - “It maximises the profit potential by exploiting sufficiency, efficiency and systems solutions.”
 - “In addition, by maintaining the ownership of objects and embodied resources, it creates long-term corporate and national resource security at low cost.”

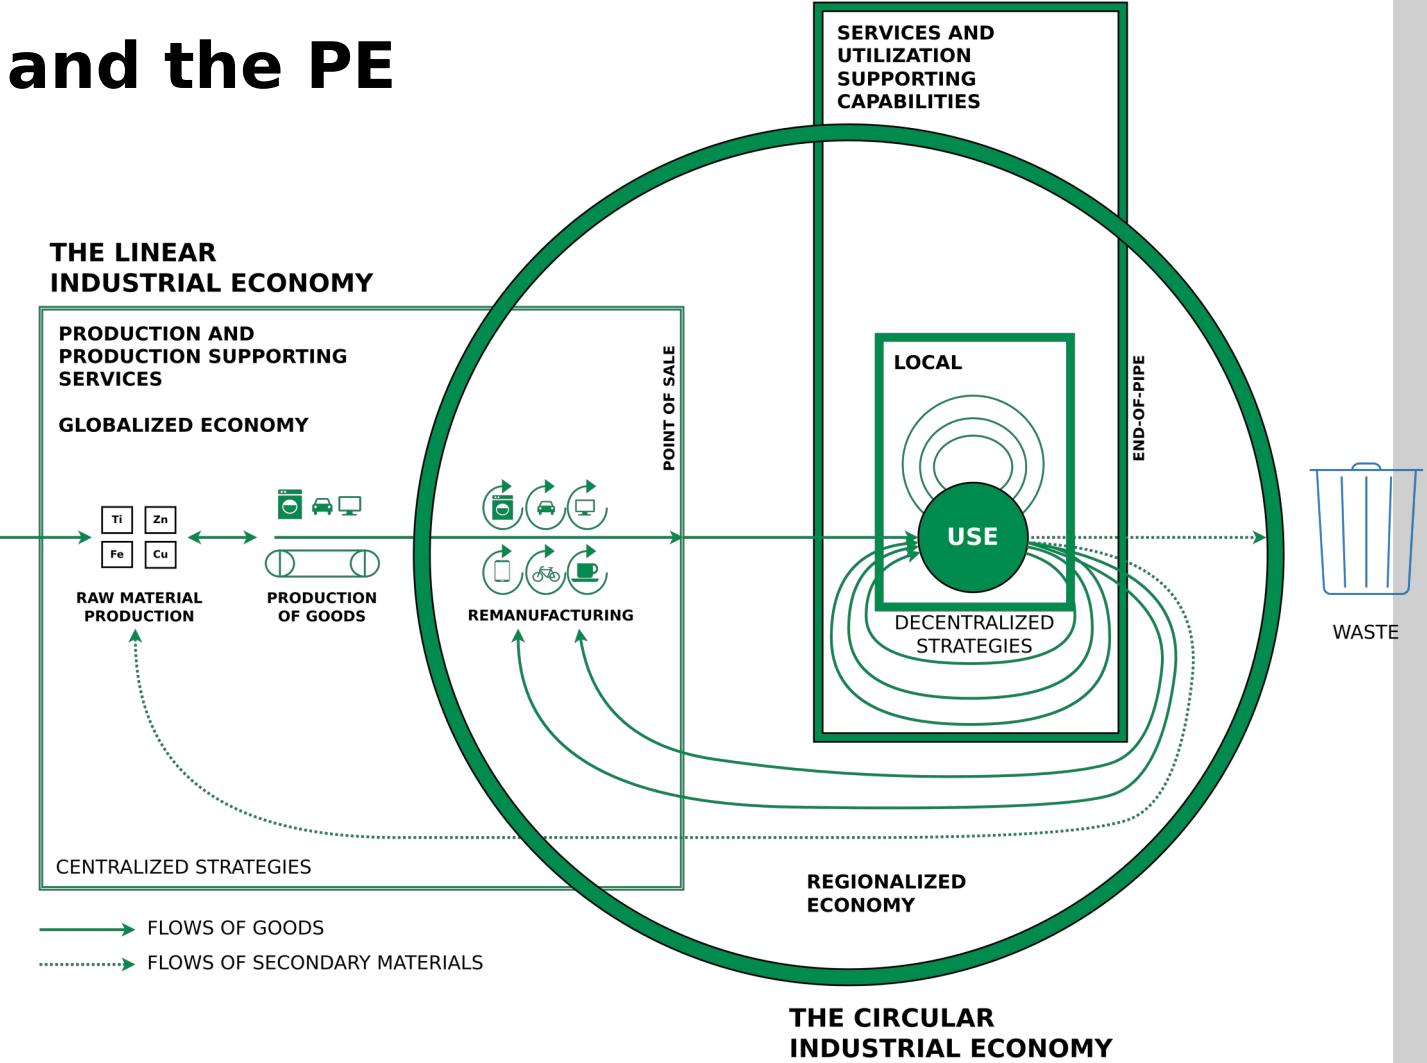

Situating the LIE, the CIE and the PE

- **Circle:** Managing the utilisation or use phase of stocks of manufactured objects and their components, by maintaining the value and quality of infrastructure, buildings, investment goods, equipment and durable consumer goods in a local or regional economy

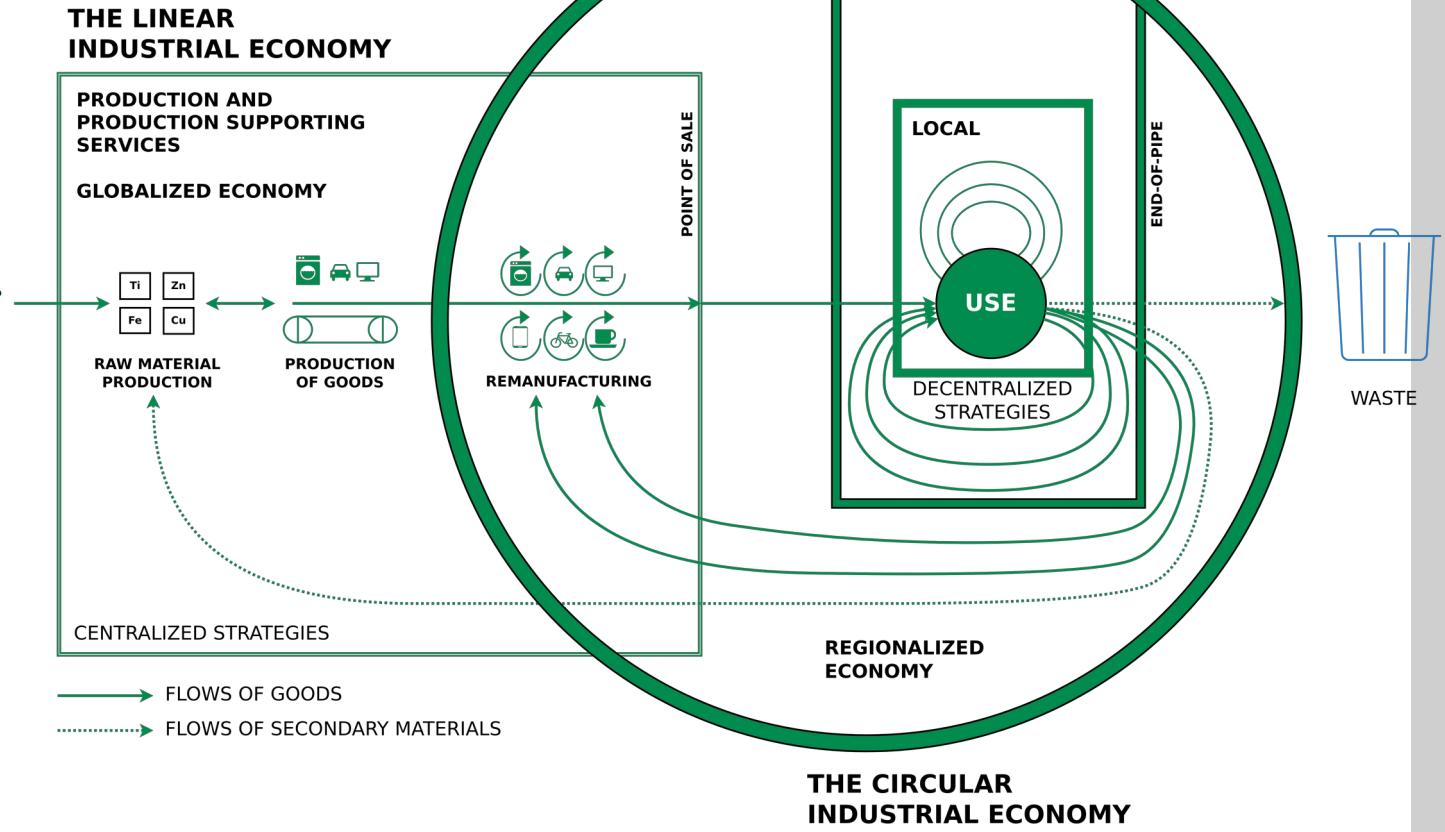

Situating the LIE, the CIE and the PE

- **Circle:** Managing the utilisation or use phase of stocks of manufactured objects and their components, by maintaining the value and quality of infrastructure, buildings, investment goods, equipment and durable consumer goods in a local or regional economy
- **Small square:** Local use-focused PE

Situating the LIE, the CIE and the PE

- **Circle:** Managing the utilisation or use phase of stocks of manufactured objects and their components, by maintaining the value and quality of infrastructure, buildings, investment goods, equipment and durable consumer goods in a local or regional economy

CONCLUSION

Conclusion

- Linear Economy (LE) → “Take – make – dispose”
- Circular Economy (CE) → Maintain value and utility as high as possible for as long as possible
- Performance Economy → Sell results instead of objects

EXERCISE E07

Exercise E07

Evaluating the MOOC Content

As we have explained in the beginning of the lecture, we are currently working on developing asynchronous and interactive learning content for the “Limits to Growth” lecture.

Sustainable Everyday Practices

The Limits to Growth – Sustainability and Circular Society

In a world faced with pressing environmental challenges, it has become increasingly important for individuals to adopt sustainable habits and make a positive impact in their daily lives. As part of the lecture "The Limits to Growth - Sustainability and Circular Society" at TU Clausthal, in this module you will learn what can be understood as sustainable everyday practices, what distinguishes individual practices from corporate action and we will give you an in-depth example of how foodsharing as way to minimize food waste and live more sustainably works and how easy it is to partake in foodsharing activities.

In order to complete this module, work through both chapters, read all the pages and watch videos included in the lessons and complete the exercises within the material.

Sustainable Everyday Practices

Throughout this module, we will delve into examples of sustainable everyday practices, discuss why it is crucial to embrace sustainable practices in your everyday life and explore the differences between individual and

Food Waste and Foodsharing

In the following section, you will learn more about one specific sustainable practice: foodsharing. What exactly is foodsharing, how does it work and how can you share food with others or get food that others are

Exercise E07

Evaluating the MOOC Content

As we have explained in the beginning of the lecture, we are currently working on developing asynchronous and interactive learning content for the “Limits to Growth” lecture.

1. Work through the whole lesson on “Sustainable Everyday Practices and Foodsharing”
 - Go to the website ([Link](#)).
 - Read all the texts, watch the videos and answers the assessment questions.
2. After you completed the online lesson, please answer the following questions:
 - What did you like about the MOOC content?
 - Which parts of the MOOC content did you not like?
 - Give up to three ways this online learning material could been improved.
